Aerospace Reports ,1993 **The Behavior of Shells Composed of Isotropic and Composite Materials** Jack R.

Vinson,2013-04-17 Shell structures are used in all phases of structures from space vehicles to deep submergence hulls from
nuclear reactors to domes on sport arenas and civic buildings With new materials and manufacturing methods curved thin
walled structures are being used increasingly This text is a graduate course in the theory of shells It covers shells of isotropic
materials such as metal alloys and plastics and shells of composite materials such as fibre reinforced polymer metal or
ceramic matrix materials It provides the essential information for an understanding of the underlying theory and solution of
some of the basic problems It also provides a basis to study the voluminous shell literature Beyond being primarily a textbook
it is intended also for self study by practising engineers who would like to learn more about the behaviour of shells The book
has two parts Part I deals with shells of isotropic materials In this part the mathematical formulations are introduced
involving curvilinear coordinates The techniques of solutions and resulting behavior is compared to planar thin walled
isotropic structures such as plates and beams Part II then treats the behavior of shells involving anisotropic composite
materials so widely used today The analysis involves the complications due to the many elastic constants effects of transverse
shear deformation thermal thickening and offer effects arising from the properties of composite materials
