Project, 2008-09-01 Everyday Mathematics 2012 Skills Link Teacher Guide Grade 3. Everyday Mathematics enables students to build conceptual understanding, computational fluency, and real-world problem-solving skills. The University of Chicago School Mathematics Project continues to develop Everyday Mathematics to enable students to become strong mathematical citizens for the 21st century. Everyday Mathematics is a core curriculum for students in pre-kindergarten through sixth grade. At each grade level, students are provided opportunities to learn concepts and practice skills in a variety of representations. A concept like fractions may first be introduced using a concrete representation such as base ten blocks. Next, the student may be asked to draw a pictorial representation of a fraction. A story problem may be introduced, and finally, an abstract representation of the fraction is introduced to the student. Using multiple representations of concepts helps students understand how abstract or formulaic representations of math are connected to the physical world. Everyday Mathematics focuses on real-life problem solving, forces students to see how math touches their lives every day. Students are given the freedom to explore different ways of solving problems and taught how to communicate their mathematical thinking. These are recognized strengths of the Everyday Mathematics program and are a large part of the Common Core State Standards. In particular, the Standards of Mathematical Practice are covered extensively in Everyday Mathematics and have been at the

heart of the program for the last 25 years when NCTM released a precursor to the Practice Standards called the Process Standards The authors of Everyday Mathematics painstakingly reviewed the Common Core State Standards and realigned content to match expectations in the Common Core However the authors have remained true to the pedagogy and their mission of making all students lifelong mathematical thinkers
