# STATES OF MATTER

## Complete Matter Unit

### What is Matter?

#### Definition:

- Matter: anything that has weight and takes up space.
- Solids: The solid state of matter.

#### What is matter?

Matter is what makes up everything around us. It is anything that has weight and takes up space. Matter can't be created or destroyed. Everything that we see is made up of matter. Even things you can't see like the air we breathe are made up of matter.

#### What makes up matter?

All matter is made up of atoms and molecules. Atoms and molecules are also called particles. An atom is the smallest part of matter. It is the building block that makes up all of the things around us. Matter can only be created or destroyed if it is broken down into its smallest parts. Atoms and molecules are held together by forces called bonds. These bonds are what hold matter together and make it solid.

Molecules are made up of a few atoms that are stuck together. They are larger than atoms and can be seen with a microscope. Atoms and molecules are the building blocks of matter. They are what make up everything around us. Matter can't be created or destroyed. Everything that we see is made up of matter. Even things you can't see like the air we breathe are made up of matter.

Imagine building a house of blocks. The individual blocks are like the particles that make up matter. They are what make up everything around us. Matter can't be created or destroyed. Everything that we see is made up of matter. Even things you can't see like the air we breathe are made up of matter.
