

Solutions to the 2013 Olympiad Hamilton Paper

1. If $xy = 10$ and $(x + 1)(y + 1) = 20$, what is the value of $(x + 2)(y + 2)$?

Solution

We are given two equations

$$xy = 10 \tag{1}$$

and

$$(x + 1)(y + 1) = 20. \tag{2}$$

After expanding the left-hand side of equation (2), we obtain

$$xy + x + y + 1 = 20,$$

from which we get, substituting from equation (1),

$$10 + x + y + 1 = 20.$$

Hence

$$x + y = 9. \tag{3}$$

Now we are asked to find the value of

$$(x + 2)(y + 2),$$

which we may expand to obtain

$$xy + 2x + 2y + 4.$$

Rewriting this in the form

$$xy + 2(x + y) + 4$$

we may substitute from equations (1) and (3) to get $10 + 2 \times 9 + 4 = 32$.

Hence the value of $(x + 2)(y + 2)$ is 32.

The Colorado Mathematical Olympiad: The Third Decade and Further Explorations Alexander Soifer, 2017-04-27

Now in its third decade the Colorado Mathematical Olympiad CMO founded by the author has become an annual state wide competition hosting many hundreds of middle and high school contestants each year This book presents a year by year history of the CMO from 2004 2013 with all the problems from the competitions and their solutions Additionally the book includes 10 further explorations bridges from solved Olympiad problems to real mathematics bringing young readers to the forefront of various fields of mathematics This book contains more than just problems solutions and event statistics it tells a compelling story involving the lives of those who have been part of the Olympiad their reminiscences of the past and successes of the present I am almost speechless facing the ingenuity and inventiveness demonstrated in the problems proposed in the third decade of these Olympics However equally impressive is the drive and persistence of the originator and living soul of them It is hard for me to imagine the enthusiasm and commitment needed to work singlehandedly on such an endeavor over several decades Branko Grünbaum University of Washington

After decades of hunting for Olympiad problems and struggling to create Olympiad problems he has become an extraordinary connoisseur and creator of Olympiad problems The Olympiad problems were very good from the beginning but in the third decade the problems have become extraordinarily good Every brace of 5 problems is a work of art The harder individual problems range in quality from brilliant to work of genius The same goes for the Further Explorations part of the book Great mathematics and mathematical questions are immersed in a sauce of fascinating anecdote and reminiscence If you could have only one book to enjoy while stranded on a desert island this would be a good choice

Like Gauss Alexander Soifer would not hesitate to inject Eureka at the right moment Like van der Waerden he can transform a dispassionate exercise in logic into a compelling account of sudden insights and ultimate triumph

Cecil Rousseau Chair USA Mathematical Olympiad Committee

A delightful feature of the book is that in the second part more related problems are discussed Some of them are still unsolved

Paul Erdős

The book is a gold mine of brilliant reasoning with special emphasis on the power and beauty of coloring proofs Strongly recommended to both serious and recreational mathematicians on all levels of expertise
