The average speed of the dog is:

errorage special 
$$= \frac{\text{total distance weakless}}{\text{total times}} = \frac{7.m}{10 \text{ s}} = .07 \text{ m/s}$$

#### What Is Velocity?

Suppose that two birds leave the same tree at the same time. They both fly at 10 knyh for 5 min, then 5 knyh for 10 min. However, they don't end up in the same place. Why BACKSTON TO

The birds did not end up in the same place because they flew in different directions. Their speeds were the some, but because they flew in different directions, their velocities were different. Velocity is the speed of an object. and its direction. 60

The velocity of an object is constant as long as both. speed and direction are constant. If a bus driving at 15 m/s south specds up to 20 m/s south, its velocity changes. If the bus loveps moving at the same speed but charates direction from south to east, its velocity also changes. If the bus braices to a stop, the velocity of the bus official autorities.

The table below shows that velocity is a combination. of both the speed of an object and its direction.

Spend	Direction	Velocity
10.19/5	noneth.	16 th may're terreside.
20 m/h	Bolopith:	Diff: Hely's manually.
20 (9/3	Field	200 mg/s event
0.00/9	ment	O'my's nast

Velocity changes when the speed changes, when the direction charges, or when both speed and direction change. The table below describes various situations in which the velocity changes.

Situation	What changes
Raindrop falling faster and faster	
Burner going around a turn on a took.	direction
Car taking an exit off a highway	spreed and direction
Your arriving at a station	speed
Baseltall being caught by a catcher	spend
Baselsell list by a harter	
	spend and direction

Ferris, Chin-Teng Lin, Scott Makeig, 2014-10-03 Decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition However technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fMRI positron emission tomography PET and magnetoencephalography MEG severely limit participants movements during experiments As a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment The concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world To gain new insights into the brain dynamics supporting natural cognition we must overcome restrictions of traditional brain imaging technology First the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements New hardware technology for electroencephalography EEG and near infrared spectroscopy NIRS allows recording electrical and hemodynamic brain activity while participants are freely moving New data driven analysis approaches must allow separation of signals arriving at the sensors from the brain and from non brain sources neck muscles eyes heart the electrical environment etc Independent component analysis ICA and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition Imaging the precisely timed distributed brain dynamics that support all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing Synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging MoBI Joint multi stream analysis of recorded
