Conference proceedings. ICT for language learning. 9th edition Pixel,2016      *Conference proceedings. ICT for language learning* Pixel,2015      **Document Analysis Systems VI** Simone Marinai,Andreas Dengel,2004-08-26

This volume contains papers selected for presentation at the 6th IAPR Workshop on Document Analysis Systems DAS 2004 held during September 8-10 2004 at the University of Florence Italy. Several papers represent the state of the art in a broad range of traditional topics such as layout analysis applications to graphics recognition and handwritten documents. Other contributions address the description of complete working systems which is one of the strengths of this workshop. Some papers extend the application domains to other media like the processing of Internet documents. The peculiarity of this 6th workshop was the large number of papers related to digital libraries and to the processing of historical documents a taste which frequently requires the analysis of color documents. A total of 17 papers are associated with these topics whereas two years ago in DAS 2002 only a couple of papers dealt with these problems. In our view there are three main reasons for this new wave in the DAS community. From the scientific point of view several research fields reached a thorough knowledge of techniques and problems that can be effectively solved and this expertise can now be applied to new domains. Another incentive has been provided by several research projects funded by the EC and the NSF on topics related to digital libraries.

*Proceedings of the Third International Conference on Contemporary Issues in Computer and Information Sciences (CICIS 2012)* ,      *IEEE TENCON 2003* ,2003      *Artificial Intelligence and Patents* Jonathan P. Osha,2023-09-14 Artificial Intelligence AI and the AI sub field of Machine Learning ML are terms that originated in the fields of computer and data science but now form part of the common vernacular. AI has now found application in virtually every field. Some applications of AI have become part of our daily lives virtual assistants chatbots search engines online language translation and eCommerce all employ AI in various forms. Generative AI such as OpenAI's products ChatGPT natural language generation Jukebox music generation and DALL-E 2 image generation have captured the public attention to an enormous degree and can indeed do amazing things. A myriad of other applications of AI are found in disparate fields that while not as visible on a daily basis impact on our lives in a wide variety of ways. With this rapidly increasing impact comes not only exciting new technical capabilities but also new challenges for intellectual property IP law. Are current laws fit for purpose or is something new or different needed? This is not a new question one need only look back to the early days of digital music computer software and 3D printing to find similar discussions of whether existing IP law is suited to emerging technologies. For the most part the answer in the past has been yes with perhaps a tweak here and there. Whether the same will be true of AI is as yet an open question. This book focuses specifically on AI and patents. Unsurprisingly different jurisdictions have taken different

approaches to patentability of AI related inventions Terminology what is an AI related invention also is inconsistent from one patent office to the next These factors combine to create a maze of laws and regulations that patent applicants must navigate to secure protection for their innovations To facilitate comparison of laws and practices this book introduces a taxonomy that separates AI related inventions into five conceptual categories The patent law implications of each category are then addressed in national and regional chapters reflecting the perspectives of 16 major jurisdictions All chapters follow the same structure thereby allowing the reader to directly compare approaches taken by different jurisdictions Thirty nine subject matter experts from around the world contributed to this book This is the eighth volume in the AIPPI Law Series which has been established together with the International Association for the Protection of Intellectual Property AIPPI a non affiliated non profit organization dedicated to improving and promoting the protection of intellectual property at both national and international levels Document Analysis and Recognition – ICDAR 2024 Workshops Harold Mouchère,Anna Zhu,2024-09-10
