**Accreditation
for Microbiological
Laboratories**

PURPOSE

This document has been produced by a joint EA/EURACHEM Working Group. It supplements ISO/IEC 17025 and provides specific guidance on the accreditation of laboratories performing microbiological testing, for both assessors and laboratories preparing for accreditation. ISO/IEC 17025 remains the authoritative documents and, in case of dispute, the individual accreditation bodies will adjudicate on unresolved matters. The guidance given in this document may be also of use to those working towards certification to the ISO 9000 series of standards.

Eurachem Ea Guide 10:

Food Contaminants and Residue Analysis Yolanda Picó, 2008-09-10 Food Contaminants and Residue Analysis treats different aspects of the analysis of contaminants and residues in food and highlights some current concerns facing this field. The content is initiated by an overview on food safety, the objectives and importance of determining contaminants and residues in food and the problems and challenges associated to these analyses. This is followed by full details of relevant EU and USA regulations. Topics such as conventional chromatographic methods, accommodating cleanup and preparing substances for further instrumental analysis are encompassed with new analytical techniques that have been developed significantly over the past few years like solid phase microextraction, liquid chromatography mass spectrometry, immunoassays and biosensors. A wide range of toxic contaminants and residues from pesticides to mycotoxins or dioxins are examined including polychlorinated biphenyls, polycyclic aromatic hydrocarbons, N-nitrosamines, heterocyclic amines, acrylamide, semicarbazide, phthalates and food packing migrating substances. This book can be a practical resource that offers ideas on how to choose the most effective techniques for determining these compounds as well as on how to solve problems or to provide relevant information. Logically structured and with numerous examples, Food Contaminants and Residue Analysis will be valuable as a reference and training guide for postgraduate students as well as a practical tool for a wide range of experts: biologists, biochemists, microbiologists, food chemists, toxicologists, chemists, agronomists, hygienists and everybody who needs to use the analytical techniques for evaluating food safety. Smith, 2011-07-22 This Springer Handbook of Metrology and Testing presents the principles of Metrology, the science of measurement, and the methods and techniques of Testing, determining the characteristics of a given product as they apply to chemical and microstructural analysis and to the measurement and testing of materials properties and performance.

including modelling and simulation The principal motivation for this Handbook stems from the increasing demands of technology for measurement results that can be used globally Measurements within a local laboratory or manufacturing facility must be able to be reproduced accurately anywhere in the world The book integrates knowledge from basic sciences and engineering disciplines compiled by experts from internationally known metrology and testing institutions and academe as well as from industry and conformity assessment and accreditation bodies The Commission of the European Union has expressed this as there is no science without measurements no quality without testing and no global markets without standards
