Applications of Computational Algebraic Geometry David A. Cox,Dinesh N. Manocha,1998 This book introduces readers to key ideas and applications of computational algebraic geometry Beginning with the discovery of Gr bner bases and fueled by the advent of modern computers and the rediscovery of resultants computational algebraic geometry has grown rapidly in importance The fact that crunching equations is now as easy as crunching numbers has had a profound impact in recent years At the same time the mathematics used in computational algebraic geometry is unusually elegant and accessible which makes the subject easy to learn and easy to apply This book begins with an introduction to Gr bner bases and resultants then discusses some of the more recent methods for solving systems of polynomial equations A sampler of possible applications follows including computer aided geometric design complex information systems integer programming and algebraic coding theory The lectures in this book assume no previous acquaintance with the material

The Color of Credit Stephen L. Ross,John Yinger,2002-11-08 An analysis of current findings on mortgage lending discrimination and suggestions for new procedures to improve its detection In 2000 homeownership in the United States stood at an all time high of 67 4 percent but the homeownership rate was more than 50 percent higher for non Hispanic whites than for blacks or Hispanics Homeownership is the most common method for wealth accumulation and is viewed as critical for access to the most desirable communities and most comprehensive public services Homeownership and mortgage lending are linked of course as the vast majority of home purchases are made with the help of a mortgage loan Barriers to obtaining a mortgage represent obstacles to attaining the American dream of owning one s own home These barriers take on added urgency when they are related to race or ethnicity In this book Stephen Ross and John Yinger discuss what has been learned about mortgage lending discrimination in recent years They re analyze existing loan approval and loan performance data and devise new tests for detecting discrimination in contemporary mortgage markets They provide an in depth review of the 1996 Boston Fed Study and its critics along with new evidence that the minority white loan approval disparities in the Boston data represent discrimination not variation in underwriting standards that can be justified on business grounds Their analysis also reveals several major weaknesses in the current fair lending enforcement system namely that it entirely overlooks one of the two main types of discrimination disparate impact misses many cases of the other main type disparate treatment and insulates some discriminating lenders from investigation Ross and Yinger devise new procedures to overcome these weaknesses and show how the procedures can also be applied to discrimination in loan pricing and credit scoring

Computer Algebra Recipes for Classical Mechanics Richard H. Enns, George C. McGuire, 2002-11-22 This is a standalone book but the recipes are correlated with topics found in standard texts and make use of MAPLE Release 7. As a reference text or self-study guide, this book is useful for science professionals and engineers. Good for the classroom, it correlates with topics found in standard classical mechanics texts. This book makes use of the powerful computer algebra system MAPLE Release 7 but no prior knowledge of MAPLE is presumed. The relevant command structures are explained on a need-to-know basis as the recipes are developed, thus making this a standalone text. *Computer Algebra Recipes* Richard Enns, George C. McGuire, 2013-03-07

Computer algebra systems have the potential to revolutionize the teaching of and learning of science. Not only can students work through mathematical models much more efficiently and with fewer errors than with pencil and paper; they can also work with much more complex and computationally intensive models. Thus, for example, in studying the flight of a golf ball, students can begin with the simple parabolic trajectory but then add the effects of lift and drag of winds and of spin. Not only can the program provide analytic solutions in some cases; it can also produce numerical solutions and graphic displays. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines including biology, economics, medicine, engineering, game theory, physics, and chemistry. The text is organized along a spiral, revisiting general topics such as graphics, symbolic computation, and numerical simulation in greater detail and more depth at each turn of the spiral. The heart of the text is a large number of computer algebra recipes. These have been designed not only to provide tools for problem solving but also to stimulate the reader's imagination. Associated with each recipe is a scientific model or method and a story that leads the reader through steps of the recipe. Each section of recipes is followed by a set of problems that readers can use to check their understanding or to develop the topic further. *Public Roads*, 1971
