

Evidence for Evolution

How are DNA and comparative anatomy used to show relatedness?

Why?

“You look just like your mother!” “He has his father’s eyes.” These comments that refer to the similarities between parents and their children are heard often in conversation. These similar traits are due to the genetic material that children inherit from their parents. As humans we are sometimes fortunate enough to have three or four generations sitting in a room at one time, and we can see the similarities from generation to generation. But how much do you look like your ancestors from 100 generations ago, 1000 generations ago or more? How much of your DNA did you inherit from those ancestors? What traits do you share with them?

Model 1 – Family Characteristics

1. Model 1 is a family tree. Circle the original parents of the family.
2. How would you describe the organisms in the second row of Model 1 that are connected to the parents by a line?
3. Identify the three members of the family that “married in” by placing a star next to their figures in Model 1.
4. How are the organisms in the third line related to the organisms in the first line?

Faculty Development on a Shoestring Diane D. Chapman, Michelle E. Bartlett, 2024-03-01 Faculty development is essential for promoting excellence in teaching and research supporting institutional goals and creating a culture of continuous learning that benefits both faculty members and students However educational institutions do not always allocate adequate resources towards supporting their faculty s professional development especially from the institutional level Underfunding this support can lead to the inability to attend conferences to keep up with the latest

research and pedagogical practices in their fields the inability to conduct meaningful research and lack of access to modern technologies This in turn can limit faculty growth and harm student learning outcomes Ultimately faculty who do not feel supported by their institutions can become disengaged or leave This book attempts to address the needs of faculty from institutions where there may not be adequate resources to support robust faculty development activities The chapters are written by faculty development experts in the US and Europe who understand the disparities between institutions and want to share programs that can be implemented for little or no cost Each chapter provides objective content implementation and evaluation details that can be used to replicate the program at other institutions The hope is to begin to level the playing field in faculty development through sharing successful low resource programs with proven outcomes **Trends in Teaching**

Experimentation in the Life Sciences Nancy J. Pelaez, Stephanie M. Gardner, Trevor R. Anderson, 2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) **Evidence and Evolution** Elliott Sober, 2008 **Why Evolution is True** Jerry A.

Coyne, 2009-01-22 For all the discussion in the media about creationism and Intelligent Design virtually nothing has been said about the evidence in question the evidence for evolution by natural selection Yet as this succinct and important book shows that evidence is vast varied and magnificent and drawn from many disparate fields of science The very latest research is uncovering a stream of evidence revealing evolution in action from the actual observation of a species splitting into two to new fossil discoveries to the deciphering of the evidence stored in our genome Why Evolution is True weaves together the many threads of modern work in genetics palaeontology geology molecular biology anatomy and development to demonstrate the indelible stamp of the processes first proposed by Darwin It is a crisp lucid and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution **Evidence of Evolution** Sue Middleton, Mary Ellen Hannibal, 2009 *Relics of Eden* Daniel J. Fairbanks, 2009-09-18 Since the publication in 1859 of Darwin's Origin of Species

debate over the theory of evolution has been continuous and often impassioned In recent years opponents of Darwin's dangerous idea have mounted history's most sophisticated and generously funded attack claiming that evolution is a theory in crisis Ironically these claims are being made at a time when the explosion of information from genome projects has revealed the most compelling and overwhelming evidence of evolution ever discovered Much of the latest evidence of human evolution comes not from our genes but from so called junk DNA leftover relics of our evolutionary history that make up the vast majority of our DNA Relics of Eden explores this powerful DNA based evidence of human evolution The relics are the millions of functionally useless but scientifically informative remnants of our evolutionary ancestry trapped in the DNA of every person on the planet For example the analysis of the chimpanzee and Rhesus monkey genomes shows indisputable evidence of the human evolutionary relationship with other primates Over 95 percent of our genome is identical with that of chimpanzees and we also have a good deal in common with other animal species Author Daniel J Fairbanks also discusses what DNA analysis reveals about where humans originated The diversity of DNA sequences repeatedly confirms the archeological evidence that humans originated in sub Saharan Africa the Eden of the title and from there migrated through the Middle East and Asia to Europe Australia and the Americas In conclusion Fairbanks confronts the supposed dichotomy between evolution and religion arguing that both science and religion are complementary ways to seek truth He appeals to the vast majority of Americans who hold religious convictions not to be fooled by the pseudoscience of Creationists and Intelligent Design advocates and to abandon the false dichotomy between religion and real science This concise very readable presentation of recent genetic research is completely accessible to the nonspecialist and makes for enlightening and fascinating reading
