Shieh, 2015-02-27 Neuroscience is by definition a multidisciplinary field some scientists study genes and proteins at the molecular level while others study neural circuitry using electrophysiology and high resolution optics A single topic can be studied using techniques from genetics imaging biochemistry or electrophysiology Therefore it can be daunting for young scientists or anyone new to neuroscience to learn how to read the primary literature and develop their own experiments This volume addresses that gap gathering multidisciplinary knowledge and providing tools for understanding the neuroscience techniques that are essential to the field and allowing the reader to design experiments in a variety of neuroscience disciplines Written to provide a hands on approach for graduate students postdocs or anyone new to the neurosciences Techniques within one field are compared allowing readers to select the best techniques for their own work Includes key articles books and protocols for additional detailed study Data analysis boxes in each chapter help with data interpretation and offer guidelines on how best to represent results Walk through boxes guide readers step by step through experiments

Route Maps in Gene Technology Mark Walker, Ralph Rapley, 2009-07-17 Route Maps in Gene Technology is an exciting new introductory textbook for first year undergraduates in molecular biology and molecular genetics The subject is broken down into 140 to 150 key concepts or topics each of which is dealt with in one doublepaged spread These range from basic introductory principles to applied topics at the cutting edge of research A control strip along the top of the page shows the student which pages need to have been read beforehand and which topics may be followed afterward In addition at the front of the book are a selection of routes which the student or teacher may choose in order to study a particular topic Because courses have become more modular and many students arrive at college with little or no biology background this approach enables teachers and students to structure a course of study to best suit their disparate exposure to biology An exciting new concept in textbook design allowing unparalleled flexibility on the part of the student and the teacher Covers the full range of modern molecular biology from basic principles to the latest applications Attractive clear and simple presentation with copious two colour illustrations

Fast Variables in Stochastic Population Dynamics George William Albert Constable, 2015-07-25 In this thesis two variants of the fast variable elimination method are developed They are intuitive simple to implement and give results which are in very good agreement with those found from numerical simulations The relative simplicity of the techniques makes them ideal for applying to problems featuring demographic stochasticity for experts and non experts alike Within the context of mathematical modelling fast variable elimination is one of the central tools with which one can simplify a multivariate problem When used in the context of deterministic systems the theory is quite standard but when stochastic effects are present it becomes less straightforward to apply While the introductory and background chapters form an excellent primer to the theory of stochastic population dynamics the techniques developed can be applied to systems exhibiting a separation of timescales in a variety of fields including population genetics ecology and epidemiology

A Litigator's Guide to DNA Ron C. Michaelis, Robert G. Flanders, Paula Wulff, 2011-08-29 A Litigator's Guide to DNA educates both criminal law students and forensic science students about all

aspects of the use of DNA evidence in criminal and civil trials It includes discussions of the molecular biological basis for the tests essential laboratory practices probability theory and mathematical calculations and issues relevant to the prosecution and the defense and to the judge and jury hearing the case The authors provide a full background on both the molecular biology and the mathematical theory behind forensic tests describing the molecular biological process in simple mechanical terms that are familiar to everyone and periodically emphasizing the practical take home messages the student truly needs to understand Pedagogical elements such as Recapping the Main Point boxes and valuable ancillary material Instructors Manual PowerPoint slides make this an ideal text for professors Recapping the Main Point boxes provide a simple and concise summary of the main points Includes a glossary of essential terms and their definitions Contains a full color insert with illustrations that emphasize key concepts

Not by Design John Reiss,2009-08-10 More than two centuries ago William Paley introduced his famous metaphor of the universe as a watch made by the Creator For Paley the exquisite structure of the universe necessitated a designer Today some 150 years since Darwin s On the Origin of Species was published the argument of design is seeing a revival This provocative work tells how Darwin left the door open for this revival and at the same time argues for a new conceptual framework that avoids the problematic teleology inherent in Darwin s formulation of natural selection In a wide ranging discussion of the historical and philosophical dimensions of evolutionary theory from the ancient Greeks to today John Reiss argues that we should look to the principle of the conditions for existence first formulated before On the Origin of Species by the French paleontologist Georges Cuvier to clarify the relation of adaptation to evolution Reiss suggests that Cuvier s principle can help resolve persistent issues in evolutionary biology including the proper definition of natural selection the distinction between natural selection and genetic drift and the meaning of genetic load Moreover he shows how this principle

can help unite diverse areas of biology ranging from quantitative genetics and the theory of the levels of selection to evo devo ecology physiology and conservation biology
