Using History to Teach Mathematics Victor J. Katz, 2000-09-21 This volume examines how the history of mathematics can find application in the teaching of mathematics itself

Beginning Algebra Dennis T. Christy, Robert Rosenfeld, 1994 This book takes a concrete approach as opposed to a conceptual approach to beginning algebra Much emphasis is placed on problem solving including relevant applications and extensive learning aids help the students

The Mathematics of Egypt, Mesopotamia, China, India, and Islam Victor J. Katz, Annette Imhausen, 2007-08-05 In recent decades it has become obvious that mathematics has always been a worldwide activity But this is the first book to provide a substantial collection of English translations of key mathematical texts from the five most important ancient and medieval non Western mathematical cultures and to put them into full historical and mathematical context The Mathematics of Egypt Mesopotamia China India and Islam gives English

readers a firsthand understanding and appreciation of these cultures important contributions to world mathematics The five section authors Annette Imhausen Egypt Eleanor Robson Mesopotamia Joseph Dauben China Kim Plofker India and J Lennart Berggren Islam are experts in their fields Each author has selected key texts and in many cases provided new translations The authors have also written substantial section introductions that give an overview of each mathematical culture and explanatory notes that put each selection into context This authoritative commentary allows readers to understand the sometimes unfamiliar mathematics of these civilizations and the purpose and significance of each text Addressing a critical gap in the mathematics literature in English this book is an essential resource for anyone with at least an undergraduate degree in mathematics who wants to learn about non Western mathematical developments and how they helped shape and enrich world mathematics The book is also an indispensable guide for mathematics teachers who want to use non Western mathematical ideas in the classroom

Intermediate Algebra Dennis T. Christy, 1994 This book takes a concrete approach to mathematics as opposed to a conceptual approach What separates this text from the competition is how much emphasis is placed on problem solving including relevant applications and the extensive learning aids incorporated to help the students

Forthcoming Books Rose Arny, 2003 HPC@Green IT Ralf Gruber, Vincent Keller, 2010-03-15 Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike However the focus of these discussions is often on single isolated and specific architectural and technological improvements for power reduction and conservation while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction Furthermore efficiency can be influenced on all levels of today's system hierarchies from single cores all the way to distributed Grid environments To improve execution and power efficiency requires progress in such diverse fields as program optimization optimization of program scheduling and power reduction of idling system components for all levels of the system hierarchy Improving computer system efficiency requires improving system performance and reducing system power consumption To research and reach reasonable conclusions about system performance we need to not only understand the architectures of our computer systems and the available array of code transformations for performance optimizations but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing HPC systems and eventually to Grid environments with multiple systems and resources

Sherlock Holmes in Babylon and Other Tales of Mathematical History Marlow Anderson, Victor Katz, Robin Wilson, 2022-04-26 Covering a span of almost 4000 years from the ancient Babylonians to the eighteenth century this collection chronicles the enormous changes in mathematical thinking over this time as viewed by distinguished historians of mathematics from the past and the present Each of the four sections of the book Ancient Mathematics Medieval and Renaissance Mathematics The Seventeenth

Century The Eighteenth Century is preceded by a Foreword in which the articles are put into historical context and followed by an Afterword in which they are reviewed in the light of current historical scholarship In more than one case two articles on the same topic are included to show how knowledge and views about the topic changed over the years This book will be enjoyed by anyone interested in mathematics and its history and in particular by mathematics teachers at secondary college and university levels **Subject Guide to Books in Print** ,1997
