ABSTRACT AND KEYWORDS

Theoretical and methodological discussion and understanding of regions - urban, rural, peripheral and cross-border, and the role of Human Capital in the regional development and growth. Employing spatial econometric models for studying human capital mobility between the urban/rural types of regions, while developing new empirical methodology of how to measure and study the cross-border regional assemblages with the social network analyses (SNA) techniques. Developing the Cross-Border Institutional Thickness (CBIT) model for understanding how cross-border interactions can promote specific regional development goals, with the example of human capital creation. Employing the case-study methods with the cases of Dutch-German (Rhine-Waal) and Danish-German (Sønderjylland-Schleswig) border regions.

Keywords: Regions, Urban/Rural, Cross-Border (CBR), Geophilosophy, Regional Assemblage Theory, Human Capital, Mobility, Regional Development, CBIT, Institutional Thickness

The Australian Geographer , 1928 *Interdisciplinary Relationships in the Social Sciences* Muzafer Sherif, 2017-07-05 Interdisciplinary collaboration in the social sciences is obviously essential to scientific progress but discontent and practical difficulties

hinder collaboration in research and training Many of the problems arise from the failure in the separate disciplines to understand the basis on which collaboration is necessary and possible In an effort to shed light on the situation these original essays by eminent scholars economists geographers psychologists political scientists sociologists anthropologists and others demonstrate effective means of achieving interdisciplinary coordination in studying human behavior and delineating promising areas for cooperative research The book provides a sophisticated guide to the nature of knowledge in social science as applied to its core disciplines *Geographers* T. W. Spatial Behavior Reginald G. Golledge, 1997-01-01 How do human beings negotiate the spaces in which they live work and play How are firms and institutions and their spatial behaviors being affected by processes of economic and societal change What decisions do they make about their natural and built environment and how are these decisions acted out Updating and expanding concepts of decision making and choice behavior on different geographic scales this major revision of the authors acclaimed Analytical Behavioral Geography presents theoretical foundations extensive case studies and empirical evidence of human behavior in a comprehensive range of physical social and economic settings Generously illustrated with maps diagrams and tables the volume also covers issues of gender discusses traditionally excluded groups such as the physically and mentally challenged and addresses the pressing needs of our growing elderly population **Ten Geographic Ideas that Changed the World** Susan Hanson, 1997 In these thought provoking witty essays some of America s most distinguished geographers explore ten geographic ideas that have literally changed the world and the way we think and act They tackle ideas that impose shape on the world ideas that mold our understanding of the natural environment and ideas that establish relationships between people and places The contributors who include several past presidents of the Association of American Geographers members of the National Academy of Sciences and authors of major works in the discipline are Elizabeth K Burns Patricia Gober Anne Godlewska Michael F Goodchild Susan Hanson Robert W Kates John R Mather William B Meyer Mark Monmonier Edward Relph Edward J Taaffe and B L Turner II **Japanese Urban System** Yuji Murayama, 2013-11-11 This book is an attempt to explain Japanese regional structure and associated dynamism in terms of urban systems It is extremely effective to use the urban systems approach to explain the regional changes in today s Japan which is undergoing changes wrought by economic globalization and the information revolution This is because the transformation into a service economy has become the key component of the economic activities of cities linkages are being

mutually strengthened and regional development is being determined by the interdependency of cities Readers hoping to gain an understanding of the regional geography of Japan may feel that the structure and content of this book are lacking something However it is not the intention of this book to systematically paint a total geographical image of Japan within the context of East Asia Instead by focusing on urban systems theory it might be possible to theorize about the factors related to the changing geography of Japan such as the growth and decline processes of Japanese urban systems the strengthening of ties among cities and associated factors and the expansion of socioeconomic exchanges with cities overseas from a perspective that is different from the conventional approach
