The Discursive Construction of Intercultural Understanding in China Wang Xi, 2015-11-11 This book represents an ethnographic study of an International Baccalaureate Diploma Program in a school in mainland China serving Chinese students and staffed by teachers from a variety of origins It offers in depth descriptions of the way in which students teachers and managers interact and communicate with one another in a variety of school activities Through the communication process cultural experiences and understandings are negotiated constantly among school participants The ethnographic study also has a critical intention Going beyond description the author discusses the extent to which networks of social relationships in the case are imbued by asymmetries in power and how this leads to people s inability unwillingness and unawareness to interact with those from different cultural backgrounds As research findings reveal where the construction of meaning is less equally available to each participant prejudice and exclusiveness are more likely to be assumed impeding individuals intercultural learning The key is to empower those less privileged giving them legitimacy to come to voice in an institutional context on the one hand and protecting their reflections on hegemonic discourse meticulously on the other hand Since the research explores the complexities and subtleties of the communication process that are bound to particular contexts like most ethnographic studies it aims at adding a body of experience and humanistic understanding of cultures rather than testing theories Although the IB Program being studied can hardly be representative of the overall development of international education in China the detailed description of contextual issues of the case and the research procedures could facilitate the readers to vicariously experience these events thus they can make their own decisions about the transferability of the research to their own unique situations

Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada s successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education
