Embryogenesis in Mammals Katherine Elliott, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world **A Laboratory Guide to the Mammalian Embryo** David K. Gardner, Michelle Lane, Andrew J. Watson, 2004-01-08 This book pulls together the full range of cell culture biochemical microscopic and genetic techniques to study the early mammalian embryo Until now there has never been such a comprehensive compendium though there have been more focused books of protocol such as Manipulating the Mouse Embryo from Cold Spring Harbor This book is intended to appeal to all constituencies from basic experimental science to clinical and animal science applications The Embryonic Development of the Ovary and Testis of the Mammals ... Bennet Mills Allen, 1903 **Experimental Approaches to Mammalian Embryonic Development** Janet Rossant, Roger A. Pedersen, 1988-11-25 Recent advances in the experimental analysis of the mammalian embryo are discussed from various scientific perspectives in this summary of major breakthroughs in embryonic development Living Embryos Jack Cohen, Brendan Massey, 2014-05-20 Living Embryos An Introduction to the Study of Animal Development covers the growth of an animal embryo specifically the sequence developmental events of an egg This book addresses the mammalian embryo as a homograph and demonstrates early vertebrate development mechanisms Some of the topics covered in the book are the early embryology development and growth of the frog mammals chick rabbit arthropods polychaetes nematodes molluscs and tunicates Other chapters deal with the formation of the nervous muscular and alimentary systems These topics are followed by the analysis of the development of fishes The discussion then shifts to the method of fertilization The last chapters examine the formation of cleavage cleavage geometry embryonic membranes and organization of the egg The book can provide useful information to embryologists biologists students and researchers **The Early Development of Mammals** British Society for Developmental Biology, 1975-08-21 **From Egg to Embryo** J. M. W. Slack, 1991-05-30 The last ten years have shown a dramatic revolution in our understanding of early animal development This new edition of the successful first edition describes the result of this revolution and explains how the body plan of an embryo emerges from the newly fertilised egg The book starts with a critical discussion of embryological concepts and explains in simple terms the mathematics of cell states morphogen gradients and threshold responses The experimental evidence on the mechanism of regional specification in *Xenopus* molluscs annelids ascidians as well as *Caenorhabditis* the mouse the chick and *Drosophila* is then discussed The whole chapter devoted to the exciting developments in *Drosophila* provides a clear guide to the subject including a new table outlining the developmentally important genes The emphasis throughout is on conceptual clarity and unity bringing together the mathematical models embryological experiments and molecular biology into a single comprehensive coherent account

From Egg to Embryo J. M. W. Slack, 1983-08-11 This book is about the development of the animal embryo starting from the fertilised egg The emphasis is on the problem of pattern formation how cells in different regions of the embryo become programmed to form the various structures of the body in the correct relative positions *Methods in Mammalian*

Reproduction Joseph C. Jr. Daniel, 2012-12-02 *Methods in Mammalian Reproduction* presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage Chapters 11 15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction **Early Mammalian Development** Matthew H.

Kaufman, 1983-10-06 **The Mammalian Preimplantation Embryo** Barry D. Bavister, 2012-12-06 With a few notable exceptions mammalian preimplantation embryos grown in vitro are likely to exhibit sub optimal or retarded development This may be manifested in different ways depending on the species and on the stage s of embryonic development that are being examined For example bovine embryos often experience difficulty in cleaving under in vitro conditions and usually cease development at about the 8 cell stage Wright and Bondioli 1981 The block to development is stage dependent embryos cultured for 24 hr from the I cell stage are much more capable of developing into viable blastocysts after transfer to oviducts than embryos cultured for 24 hr from the 4 cell stage prior to transfer Eyestone et oZ 1985 Similar problems with in vitro embryo development are encountered in other species Pig embryos can be grown up to the 4 cell stage in vitro but usually no further Davis and Day 1978 In the golden hamster in the rat and in many outbred strains of mice development of zygotes in vitro is blocked at the 2 cell stage Yanagimachi and Chang 1964 Whittingham 1975 Even with some inbred mouse strains embryo development is reduced if very early cleavage stages are used as the starting point for in vitro culture Spielmann et oZ 1980 A common finding is that embryos grown in vitro have reduced cell counts Harlow and Quinn 1982 Kane 1985 and

their viability is reduced Bowman and McLaren 1970 Papaioannou and Ebert 1986 compared to equivalent developmental stages recovered from mated animals *Text-book of the Embryology of Man and Mammals* Oscar Hertwig,1901

Text-book of the embryology of man and mammals Oskar Hertwig,1901 Early Embryonic Development of Animals Wolfgang Hennig,2013-10-03 Four of the major animal systems studied for the mechanisms of their early embryonic development are treated in this volume The articles address the specific questions studied in the various systems discuss the fundamental questions raised by the particular organism and explain the techniques used to find answers to these questions Questions of patternformation early organogenesis and the genetics of the early development arecovered as well as the question of parental imprinting phenomena in mammals which are important for the early differentiation The development of the mouse *Drosophila* *Caenorhabditis* and the zebrafish is emphasized by leading experts of their fields and current problems in each system are exposed For the zebrafish the advantages of this new system for developmental biology studies are summarized and discussed in their values while in the other system the emphasis is laid on one of the actual field of research

Living Embryos Jack Cohen,2013-10-22 *Living Embryos An Introduction to the Study of Animal Development* Revised Second Edition presents the processes of development as seen throughout the animal kingdom This book discusses the development of the organ systems of vertebrates Comprised of 41 chapters this edition starts with an overview of the history of the study of embryology which is concerned with the process by which the adult arises from the fertilized egg This text then discusses the role of the sperm in the determination of bilateral symmetry Other chapters consider the development of the frog in order to give a basis for comparison with other species This book discusses as well the structure of the hen s egg and illustrates the various stages of the development of the chick The final chapter deals with animal evolution which produces a wide variety of animal forms Embryologists zoologists medical students graduate students university lecturers and teachers will find this book extremely useful **An Atlas for Staging Mammalian and Chick Embryos** H.

Mouse Development Jacek Z. Kubiak, 2012-08-24 The mouse is a perfect model organism to study mammalian and thus indirectly also human embryology Most scientific achievements that have had an important impact on the understanding of basic mechanisms governing embryo development in humans originated from mouse embryology Stem cell research which now offers the promise of regenerative medicine began with the isolation and culture of mouse embryonic stem cells by Martin Evans who received the Nobel Prize in medicine in 2007 for this achievement and Matthew Kaufman This book provides an overview of mouse development spanning from oocytes before fertilization to the state of the art description of embryonic and adult stem cells The chapters written by the leading specialists in the field deal with the most recent discoveries in this extremely fast developing area of research
