of the UN Model Convention Anna Binder, Viktoria Wöhrer, 2019-10-01 Detailed research on the UN Model Convention's unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations Driven by the aim to achieve consistency in the international tax treaty practice the structure and content is to a large extent similar in the UN Model and the OECD Model However whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and amending the UN Model Convention Compared to the OECD Model Convention the UN Model Convention aims at giving more weight to the source principle Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided Interestingly in the discussions of the tax challenges arising from the digitalization of the economy the OECD and the G20 are also exploring options to allocate more taxing rights to the jurisdiction of the customer and or user i e the market jurisdictions As this has traditionally been the focus of the UN Model Convention its unique features and developing countries practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement This book contains the master's theses of the full time LL M program 2018 2019 for which Special Features of the UN Model Convention has been chosen as the general topic With this book the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention which are explored in detail This is supplemented with an evaluation of the function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD's BEPS project on the

UN Model **Pipeline Rules of Thumb Handbook** E.W. McAllister,2015-06-02 This classic reference has built a reputation as the go to book to solve even the most vexing pipeline problems Now in its seventh edition Pipeline Rules of Thumb Handbook continues to set the standard by which all others are judged The 7th edition features over 30% new and updated sections reflecting the exponential changes in the codes construction and equipment since the sixth edition The seventh edition includes recommended drill sizes for self tapping screws new ASTM standard reinforcing bars calculations for calculating grounding resistance national Electrical Code tables Coriolis meters pump seals progressive cavity pumps and accumulators for lubricating systems Shortcuts for pipeline construction design and engineering Calculations methods and handy formulas Turnkey solutions to the most vexing pipeline problems **Mergers, Acquisitions, and Other Restructuring Activities** Donald DePamphilis,2011-09-30 Two strengths distinguish this textbook from others One is its presentation of subjects in the contexts where they occur Students see different perspectives on subjects and learn how complex and dynamic the mergers and acquisitions environment is The other is its use of current events Of its 72 case studies 3 4 are new or have been updated The implications of Dodd Frank and US Supreme Court rulings affecting the Sarbanes Oxley Act among other regulatory changes are developed to enhance teaching and learning experiences Other improvements to the 6th edition have shortened and simplified chapters increased the numbers and types of pedagogical supplements and expanded the international appeal of examples With a renewed focus on empirical and quantitative examples the 6th edition continues to demonstrate how people work together on mergers and acquisitions and why the actions of specific individuals have far reaching implications Presents an integrated approach to the activities involved in mergers acquisitions business alliances and corporate restructurings All chapters have been revised updated and contain new content and 14 include more extensive changes Structural revisions make chapters more streamlined shorter and less complex Case studies cover a dozen industries and 75% are new or have been updated All include discussion questions and answers **Tax Treaty Residence of Entities** Jan Gooijer,2019-09-13 It is of great importance to be able to determine who or what is considered resident within the meaning of tax treaty provisions However the concept of residence has never been fundamentally adjusted to current circumstances in which technological developments make it possible for corporations to explore the wide gap between their actual business operations and the legalistic requirements for corporate residence In this study of the OECD Model Tax Convention the basis for most tax treaties the author develops a clear understanding of the content of the residence concept as regards entities and proposes solutions to current problems finishing with his own thoroughgoing definition In seeking a definition of the term resident that covers all uses in treaties the analysis draws on in addition to the current and earlier iterations of the OECD Model Law itself such elements as the following domestic law meaning of residence in the tax law of France Germany the Netherlands the United Kingdom and the United States Articles 31 and 32 of the Vienna Convention on the Law of Treaties historical documents that uncover the ordinary meaning of treaty

terms tax treaty case law and court decisions and fiscal tax and legal scholarship surrounding the concept of residence for taxation purposes The analysis includes a comprehensive description of tiebreaker rules various perspectives on place of effective management and policy considerations as to the further development of the treatment of entities under double tax conventions Given the inordinate importance of the definition of resident the differences in interpretation to which the current definition gives rise and the economic developments that call for an evaluation of the provision this thorough examination of the treaty rules on residence of entities will be welcomed by tax lawyers corporate counsel and policymakers and academics concerned with tax law The author's guidance on the concept of residence for tax purposes and his original proposals for reform will prove of great practical value for tax practitioners Thor Dan Jurgens, 2015-12-17 Collects Thor 1998 68 74 The day of man is over Now is the time of gods on Earth A character from the present is thrust into the future to witness the brave new world Thor has built atop the ruins of human society Is it a utopia or a totalitarian state This visitor from the past thinks he knows the answer and his presence threatens to tear the Thunder God's new kingdom apart

Mergent International Manual, 2009 **Macroeconomic Policy** Martin Weale, Andrew Blake, Nicos Christodoulakis, James Meade, David Vines, 2015-10-05 This analysis of macroeconomic policy originally published in 1989 argues that key government objectives such as reduced inflation decreased unemployment and an adequate level of national saving can be achieved only by employing both monetary and fiscal policies in conjunction with supply side policies expressly designed to improve the workings of the labour market Part 1 is a comparative analysis showing the effects of monetary and fiscal policy on the economy Real wage rigidity in the labour market is shown to have important consequences for the working of both types of policy because it conditions the economy's response to tax changes Part 2 presents an econometric model which combines consistent stock flow accounts with a full range of expectational effects Part 3 presents an innovative technique for solving rational expectations models with the need for arbitrary terminal conditions **Portraits of Labor Market Exclusion** Ramya Sundaram, Ulrich Hoerning, Natasha de Andrade Falcão, Natalia Millán, Carla Tokman, Michele Zini, 2015-07-16 Portraits of Labor Market Exclusion presents profiles or portraits of individuals who have limited labor market attachment It is widely accepted that those with limited attachment to the labor market are a highly heterogeneous group including for instance recent job losers long term unemployed school leavers with no labor market experience those close to retirement age or people with caring responsibilities and that understanding their circumstances and potential barriers is an essential prerequisite for designing and implementing a tailored and effective mix of policy support and incentives The report takes a comprehensive view focusing on both the labor market attachment of a country's out of work population and the social assistance package and poverty profile of the same segment of the population In essence the report looks at individuals through the lenses of both poverty welfare status and labor market indicators and in doing so the portraits helps move the dialogue from a purely labor market centric view to a broader dialogue that includes social policy as

a whole This is an important shift for instance social protection programs such as family benefits and maternity benefits and broader social policy issues such as retirement ages often have a great impact on who remains inactive Specifically the report presents portraits of the out of work population of six countries Bulgaria Estonia Greece Hungary Lithuania and Romania in terms of distance from the labor market human capital and labor supply conditions as well as demographic conditions The analysis relies on the European Union Statistics of Income and Living Conditions EU SILC surveys for the years 2007 to 2011 Latent class analysis methodology allows multidimensional profiling of the out of work population and identifies classes or groups of out of work individuals that are as homogeneous as possible within each class according to a set of observable characteristics and as distant as possible between classes Consequently this analysis provide a much richer glimpse of the very different barriers to labor market integration that these various groups experience considerably augmenting the limited amount of information contained in traditional descriptive statistics
