

Application Controls Audits

Introduction

Applications are software programs that facilitate an organisation's key business processes including finance, human resources, case management, licensing and billing. Applications also facilitate specialist functions that are unique and essential to individual entities.

Each year we review a selection of important applications that agencies rely on to deliver services. We focus on the key controls that ensure data is completely and accurately captured, processed and maintained. Failings or weaknesses in these controls have the potential to affect other organisations and the public. Impacts range from delays in service and loss of information, to possible fraudulent activity and financial loss.

Audit focus and scope

We reviewed key business applications at 5 agencies. Each application is important to the operations of the agency and may affect stakeholders, including the public, if the application and related processes are not managed appropriately.

The 5 agency applications we reviewed were:

1. **Image and Infringement Processing System (IIPS)** – Western Australian Police
2. **Navigate** – Department of Racing, Gaming and Liquor
3. **Laboratory Information Management Systems (LIS)** – Chemistry Centre
4. **Case Management and Intelligence System (CMIS)** – Corruption and Crime Commission
5. **Project and Contract Management (PACMAN)** – Department of Finance

Our application reviews look at the systematic processing and handling of data in the following categories:

1. **Policies and procedures** – are appropriate and support reliable processing of information
2. **Security of sensitive information** – controls exist to ensure integrity, confidentiality and availability of information at all times
3. **Data input** – information entered is accurate, complete and authorised
4. **Backup and recovery** – is appropriate and in place in the event of a disaster
5. **Data output** – online or hard copy reports are accurate and complete
6. **Data processing** – information is processed as intended, in an acceptable time
7. **Segregation of duties** – no staff perform or can perform incompatible duties
8. **Audit trail** – controls over transaction logs ensure history is accurate and complete
9. **Masterfile maintenance, interface controls, data preparation** – controls over data preparation, collection and processing of source documents ensure information is accurate, complete and timely before the data reaches the application.

Information System Audit Report:

Information System Audit Philippe Peret, 2022-07-07 The digitalization of companies is a recurrent topic of conversation for managers. Companies are forced to evolve at least as fast as their competitors. They have to review their organization, their processes, and their way of working. This also concerns auditors in terms of their audit strategy and working methods. Digitalization is the tip of the iceberg that represents the increasing reliance on information technology of the company's information system. Companies have seen new competitors succeed with a digital approach: competitors that have opened new markets or new ways of interacting with their customers, and all business processes can be digitalized. In this new paradigm, auditors have to renew themselves too. Long gone are the days of auditors specializing in one technique like financial auditors or IT auditors. This makes it a phenomenal opportunity for auditing to renew itself, embracing the vision of the company's information system. Long live the information system auditors. This book proposes you to go step by step from a common understanding of our history of auditing to gradually defining and justifying the impacts of digitalization on the audit strategy and the preparation of audits.

Federal Information System Controls Audit Manual (FISCAM) Robert F. Dacey, 2010-11 FISCAM presents a methodology for performing information system (IS) control audits of governmental entities in accordance with professional standards. FISCAM is designed to be used on financial and performance audits and attestation engagements. The methodology in the FISCAM incorporates the following:

1. A top-down risk-based approach that considers materiality and significance in determining audit procedures.
2. Evaluation of entity-wide controls and their effect on audit risk.
3. Evaluation of general controls and their pervasive impact on business process controls.
4. Evaluation of security management at all levels.
5. Control hierarchy to evaluate IS control weaknesses.
6. Groupings of control categories consistent with the nature of the risk.

Security Controls Evaluation, Testing, and Assessment Handbook Leighton Johnson, 2019-11-21 Security Controls Evaluation, Testing, and Assessment Handbook, Second Edition, provides a current and well-developed approach to evaluate and test IT security controls to prove they are functioning correctly. This handbook discusses the world of threats and potential breach actions surrounding all industries and systems. Sections cover how to take FISMA, NIST Guidance, and DOD actions while also providing a detailed hands-on guide to performing assessment events for information security professionals in US federal agencies. This handbook uses the DOD Knowledge Service and the NIST Families assessment guides as the basis for needs assessment requirements and evaluation efforts. Provides direction on how to use SP800-53A, SP800-115, DOD Knowledge Service, and the NIST Families assessment guides to implement thorough evaluation efforts. Shows readers how to implement proper evaluation testing, assessment procedures, and methodologies with step-by-step walkthroughs of all key concepts. Presents assessment techniques for each type of control, provides evidence of assessment, and includes proper reporting techniques.
