It is therefore imperative for everyone, decision makers and engineers alike involved with the future of energy, to be appropriately acquainted with HVAC. Lecture Notes on Engineering Human Thermal Comfort explains the quintessence of engineering human thermal comfort through straight forward writing designed to help students better comprehend the materials presented. Illustrative figures, anecdotal banter and ironical analogies interject the necessary technical humdrum to provide timeous stimuli in the midst of arduous technical details. This book is primarily for senior undergraduate engineering students interested in engineering human thermal comfort. It invokes some undergraduate knowledge of thermodynamics, heat transfer and fluid mechanics as needed to enable students to appreciate thermal comfort engineering without the need to seek out other textbooks. **An Overview of Heat Transfer Phenomena** Salim Newaz Kazi, 2012-10-31. In the wake of energy crisis due to rapid growth of industries, urbanization, transportation and human habit, the efficient transfer of heat could play a vital role in energy saving. Industries, household requirements, offices, transportation are all dependent on heat exchanging equipment. Considering these, the present book has incorporated different sections related to general aspects of heat transfer phenomena: convective heat transfer, mode boiling and condensation, heat transfer to two phase flow and heat transfer augmentation by different means.
