

Chapter 7 - Sections & Objectives

- 7.1 IPv4 Network Addresses
 - Convert between binary and decimal numbering systems.
 - Describe the structure of an IPv4 address including the network portion, the host portion, and the subnet mask.
 - Compare the characteristics and uses of the unicast, broadcast, and multicast IPv4 addresses.
 - Explain public, private, and reserved IPv4 addresses.
- 7.2 IPv6 Network Addresses
 - Explain the need for IPv6 addressing.
 - Describe the representation of an IPv6 address.
 - Describe types of IPv6 network addresses.
 - Configure global unicast addresses.
 - Describe multicast addresses.
- 7.3 Connectivity Verification
 - Explain how ICMP is used to test network connectivity.
 - Use ping and traceroute utilities to test network connectivity.

Computer Networks and Systems Thomas G. Robertazzi,2012-12-06 Statistical performance evaluation has assumed an increasing amount of importance as we seek to design more and more sophisticated communication and information processing systems The ability to predict a proposed system s performance before one constructs it is an extremely cost effective design tool This book is meant to be a first year graduate level introduction to the field of statistical performance evaluation It is intended for people who work with statistical performance evaluation including engineers computer scientists and applied mathematicians As such it covers continuous time queueing theory chapters 1 4 stochastic Petri networks chapter 5 discrete time queueing theory chapter 6 and recent network traffic modeling work chapter 7 There is a short appendix at the end of the book that reviews basic probability theory This material can be taught as a complete semester long course in performance evaluation or queueing theory Alternatively one may teach only chapters 2 and 6 in the first half of an introductory computer networking course as is done at Stony Brook The second half of the course could use a more protocol oriented text such as ones by Saadawi SAAD or Stallings STALL

Basic Networking Level 1 AMC College, A network is any collection of independent computers that communicate with one another over a shared network medium A computer network is a collection of two or more connected computers When these computers are joined in a network people can share files and peripherals such as modems printers tap backup drives or CD ROM drives Automatic Generation Of Neural Network Architecture Using Evolutionary Computation R P Johnson,Lakhmi C Jain,E Vonk,1997-10-31 This book describes the application of evolutionary computation in the automatic generation of a neural network architecture The architecture has a significant influence on the performance of the neural network It is the usual practice to use trial and error to find a suitable neural network architecture for a given problem The process of trial and error is not only time consuming but may not generate an optimal network The use of evolutionary computation is a step towards automation in neural network architecture generation An overview of the field of evolutionary computation is presented together with the biological background from which the field was inspired The most commonly used approaches to a mathematical foundation of the field of genetic algorithms are given as well as an overview of the hybridization between evolutionary computation and neural networks Experiments on the implementation of automatic neural network generation using genetic programming and one using genetic algorithms are described and the efficacy of genetic algorithms as a learning algorithm for a feedforward neural network is also investigated Routing and Wavelength Assignment for WDM-based Optical Networks Bijoy Chand Chatterjee,Nityananda Sarma,Partha Pratim Sahu,Eiji Oki,2016-10-01 This book presents an in depth treatment of routing and wavelength assignment for optical networks and focuses specifically on quality of service and fault resiliency issues It reports on novel approaches for the development of routing and wavelength assignment schemes for fault resilient optical networks which improve their performance in terms of signal quality call blocking congestion level and reliability without a substantial increase in network setup cost The book first presents a solution for reducing the effect of the wavelength continuity constraint during the routing and wavelength assignment phase Further it reports on an approach allowing the incorporation of a traffic grooming mechanism with routing

and wavelength assignment to enhance the effective channel utilization of a given capacity optical network using fewer electrical optical electrical conversions As a third step it addresses a quality of service provision scheme for wavelength division multiplexing WDM based optical networks Lastly the book describes the inclusion of a tree based fault resilience scheme in priority based dispersion reduced wavelength assignment schemes for the purpose of improving network reliability while maintaining a better utilization of network resources Mainly intended for graduate students and researchers the book provides them with extensive information on both fundamental and advanced technologies for routing and wavelength assignment in optical networks The topics covered will also be of interest to network planners and designers
