and to the Methodology of Deductive Sciences ... Enlarged and Revised Edition. (Translated by Olaf Helmer.). Alfred TARSKI, 1941 Einführung in Die Symbolische Logik Rudolf Carnap, 1958-01-01 A clear comprehensive and rigorous treatment develops the subject from elementary concepts to the construction and analysis of relatively complex logical languages It then considers the application of symbolic logic to the clarification and axiomatization of theories in mathematics physics and biology Hundreds of problems examples and exercises 1958 edition *Alfred Tarski on Scientific Semantics* David Hitchcock, Magda Stroińska, 2025-01-11 This book tells the story of the landmark event in modern logic whereby Alfred Tarski became the man who defined truth Alfred Tarski's classic monograph on truth became known internationally in 1935 when he presented its ideas in German at an international conference and collaborated in preparation of its German translation This book provides the first English translation of the Polish version of Tarski's conference paper which for purposes of comparison is printed side by side with a new exact English translation of the German version It offers for the first time a comprehensive and detailed analysis of the paper and for the first time a description and analysis of the discussion of the paper immediately after its presentation It discusses 22 substantive differences between the two versions The book also extracts from recently discovered correspondence about the German translation of the truth monograph how it was decided to produce such a translation the process of vetting and changing the translation changes requested by Tarski objections to the appeal to intuition in the Polish original supported by a list of those appeals with their replacements in the German and English translations other translational issues discrepancies other than those concerning appeals to intuition between the Polish original and its German translation the Keystone cops saga of Tarski's off prints and monetary matters It lists from Tarski's journal his skiing mountaineering and tourist trips in 1935 and describes his companions on those trips An electronic supplement translates or summarizes the complete correspondence with comments and includes images from Tarski's journal of his itineraries of his 1935 trips with the editors explanatory comments Language, Logic and Method Robert S. Cohen, Marx W. Wartofsky, 2012-12-06 Fundamental problems of the uses of formal techniques and of natural and instrumental practices have been raised again and again these past two decades in many quarters and from varying viewpoints We have brought a number of quite basic studies of these issues together in this volume not linked conceptually nor by any rigorously defined problematic but rather simply some of the most interesting and even provocative of recent research accomplishments Most of these papers are derived from the Boston Colloquium for the Philosophy of Science during 1973-80 the two exceptions being those of Karel Berka on scales of measurement and A A Zinov'ev on a non traditional theory of quantifiers Just how intriguing these results or conjectures seem to us may be seen from some brief quotations 1 Judson Webb the abstract machine concept has many of the appropriate kinds of properties for modelling living reproducing rule following self reflecting accident prone and lucky creatures the a priori logical results relevant to the abstract machine concept above all Godel's could not conceivably have turned out any better for the mechanist 2 M L Dalla

Chiara modal interpretation of quantum logic shows clearly that it possesses a logical meaning which is quite independent of quantum mechanics 3 Isaac Levi as against Peirce and Popper infallibilism is consistent with corrigibilism and a view which respects avoidance of error is an important desideratum for science Measurement Karel Berka, 2012-12-06 For many years Karel Berka has worked at some of the central problems of the theory of the sciences At once a logician a mathematician a careful student of the physical sciences and the social sciences and a sharp but sympathetic critic of the major philosophies of science in this century Berka brings to this treatise on measurement both his technical mastery and his historical sensitivity We appreciate his careful analysis of his predecessors notably Helmholtz Campbell Holder Bridgman Camap Hempel and Stevens and of his contemporaries such as Brian Ellis and also Patrick Suppes and J L Zinnes The issues to be clarified are familiar but still troubling how to justify the conceptual transition from classification to a metric how to explore ways to provide a quantitative understanding of a qualitative concept indeed how to understand and thereby control the Galilean enthusiasm to measure what is measurable and to try to render measurable what is not so as yet *The Nature of Scientific Theory* Lawrence Sklar, 2014-06-23 About the Series Contemporary philosophy of science combines a general study from a philosophical perspective of the methods of science with an inquiry again from the philosophical point of view into foundational issues that arise in the various special sciences Methodological philosophy of science has deep connections with issues at the center of pure philosophy It makes use of important results for example in traditional epistemology metaphysics and the philosophy of language It also connects in various ways with other disciplines such as the history and sociology of the sciences with pure logic and with such branches of mathematics as probability theory These volumes are for the most part devoted to readings in the methodological aspects of the philosophy of science One volume however takes up the philosophical issues in the foundations of a particularly important special science that is the issues in the foundations of theories of contemporary physics The methodological volumes cover a number of crucial general problem areas The first volume takes up issues in the nature of scientific explanation and the related issues of the nature of scientific law and of the casual relation among events The second volume explores issues in the nature and structure of scientific theories The third volume collects inquiries into the nature of scientific change as one theory is replaced by another Volume four is devoted to readings concerning the nature of probability and the nature and justification of inductive reasoning in science The following volume continues the exploration of the issue of confirming and rejecting theories with a series of readings devoted to Bayesian methodologies in science and to the exploration of non inductive strategies for rationalizing belief Finally volume six explores three major problem areas in the foundation of physics the nature and rationale for physical theories of space and time the interpretive problems arising out of the quantum theory and some puzzles arising out of statistical mechanical theories of physics The readings are selected and arranged to provide the user with systematic access to the most important contemporary themes in methodological philosophy of science and in philosophy of physics The selections include many
