The rights and wrongs of zebrafish: Behavioral phenotyping of zebrafish Allan V. Kalueff,2017-02-06 Animal models and tests have become increasingly important for biomedical research enabling a better understanding of pathogenic pathways involved in various human disorders Over the last decades zebrafish *Danio rerio* have become a very popular model organism in biomedical research Recently this fish has entered the waters of neuroscience and biological psychiatry quickly becoming an indispensable model species in this field With a high genetic homology to humans 75% based on coding regions it is not surprising that humans and fish are very similar physiologically and behaviorally Therefore it should not come as a surprise that zebrafish can be an excellent model of human neuropsychiatric disorders While some classical psychiatrists may not too easily be persuaded by this generalization the current book *The rights and wrongs of zebrafish principles of behavioral phenotyping and CNS disease modeling* explains in a domain by domain manner how exactly zebrafish models can be used to target a wide range of human brain disorders and aberrant phenotypes The contributors to this book are leading international scholars whose work spearheads innovative zebrafish neuroscience research around the world Written by top experts in the field this book makes for a useful balanced and up to date reading that outlines the use of zebrafish to study the pathological mechanisms underlying neuropsychiatric disorders

Preference Learning Johannes Fürnkranz,Eyke Hüllermeier,2010-11-19 The topic of preferences is a new

branch of machine learning and data mining and it has attracted considerable attention in artificial intelligence research in previous years. It involves learning from observations that reveal information about the preferences of an individual or a class of individuals. Representing and processing knowledge in terms of preferences is appealing as it allows one to specify desires in a declarative way to combine qualitative and quantitative modes of reasoning and to deal with inconsistencies and exceptions in a flexible manner. And generalizing beyond training data models thus learned may be used for preference prediction. This is the first book dedicated to this topic and the treatment is comprehensive. The editors first offer a thorough introduction including a systematic categorization according to learning task and learning technique along with a unified notation. The first half of the book is organized into parts on label ranking, instance ranking and object ranking while the second half is organized into parts on applications of preference learning in multiattribute domains, information retrieval and recommender systems. The book will be of interest to researchers and practitioners in artificial intelligence in particular machine learning and data mining and in fields such as multicriteria decision making and operations research.

Nonparametric Statistical Tests Markus Neuhauser, 2011-12-19 Nonparametric Statistical Tests: A Computational Approach describes classical nonparametric tests as well as novel and little known methods such as the Baumgartner-Weiss-Schindler and the Cucconi tests. Computer and Information Science Roger Lee, 2018-09-03 This book presents the outcomes of the 17th IEEE ACIS International Conference on Computer and Information Science (ICIS 2018) which was held in Singapore on June 6-8, 2018. The aim of the conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users and students to discuss the various fields of computer science and to share their experiences and to exchange new ideas and information in a meaningful way. The book includes findings on all aspects: theory, applications and tools of computer and information science and discusses related practical challenges and the solutions adopted to solve them. The conference organizers selected the best papers from those accepted for presentation. The papers were chosen based on review scores submitted by members of the program committee and underwent a further rigorous round of review. From this second round, 13 of the conference's most promising papers were then published in this Springer SCI book and not the conference proceedings. We impatiently await the important contributions that we know these authors will make to the field of computer and information science.
