

Investigating Parallel Lines and Angle Pairs

Lines m and n are parallel. Eight angles are formed when transversal t intersects lines m and n . The following postulate and theorems represent the relationships between the angles formed when parallel lines are cut by a transversal.

Postulate: If two parallel lines are cut by a transversal, then the corresponding angles are congruent.

$$\angle 1 = \angle 5 \quad \angle 2 = \angle 6 \quad \angle 3 = \angle 7 \quad \angle 4 = \angle 8$$

Theorem: If two parallel lines are cut by a transversal, then the alternate interior angles are congruent.

$$\angle 3 = \angle 6 \quad \angle 4 = \angle 5$$

Theorem: If two parallel lines are cut by a transversal, then consecutive (same side) interior angles are supplementary.

$$\angle 3 \text{ is supplementary to } \angle 5 \quad \angle 4 \text{ is supplementary to } \angle 6$$

Theorem: If two parallel lines are cut by a transversal, then same side exterior angles are supplementary.

$$\angle 1 \text{ is supplementary to } \angle 7 \quad \angle 2 \text{ is supplementary to } \angle 8$$

Theorem: If two parallel lines are cut by a transversal, then alternate exterior angles are congruent.

$$\angle 1 = \angle 8 \quad \angle 2 = \angle 7$$

Perpendicular Transversal Theorem: If a line is perpendicular to one of two parallel lines, then it is perpendicular to the second line.
