(a) Read the passage. Then answer the questions below 1 and 2 :

[May Day or International Workers' Day is observed on May 1 all over the world today to commemorate the historical struggle and sacrifices of the working people to establish an eight-hour workday.] It is a public holiday in almost all the countries of the world. [Since the Industrial Revolution in the 18th and 19th centuries in Europe and the US, the workers in mills and factories had been working a long shift, fourteen or even more hours a day.]

2. [On May 1st in 1886, inspired by the trade unions, half of the workers at the Mc Cormick Harvester Company in Chicago went on strike demanding an eight-hour work day.] Two days later, a workers' rally was held near the Mc Cormick Harvester Company and about 6000 workers joined it. The rally was addressed by the labour leaders. They urged the workers to stand together, to go on with their struggle and not to give in to their bosses. Just at this moment some strike breakers started leaving the meeting place. The strikers went down the street to bring them back. [Suddenly about 200 policemen attacked them with clubs and revolvers. One striker was killed instantly, five or six others were badly injured.]

The events of May 1, 1886 are a reminder that workers will continue to be exploited until they stand up and speak out to gain better working conditions, better pay and better lives.

J S C English 1st Paper 2014:

Global Issues and Talent Development Khali Dirani, Fredrick. M. Nafukho, Beverly Irby, 2018-10-01 Talent management TM and talent development TD are of the most important areas of focus for organizational leaders and scholars around the world Machado 2015 Geographic boundaries have become increasingly permeable with talent considerations being a key factor in the decision of where organizations locate their operations Farndale Scullion Sparrow 2010 These changes in global market conditions have lead organizations to develop robust global talent management and development strategies that help organizations attract and retain the best talent Nilsson Ellstr m 2012 Still most international TM and TD initiatives can be described as ad hoc non strategic or based on exported models from the West Machado 2015 From an operational perspective although there is a surge in research on TM and TD practices across different regions most of what we know about these topics is based on government and practitioners reports Nowadays organizations are operating in diverse environments catalyzed by globalization economic openness and governmental smart visions and practical policies Governments and organizations alike are aspiring to become talent magnet destination attracting expatriates from all over the world The question we try to answer in this book is whether entities are able to continue their growth through current TM and TD practices or whether a more strategic approach is needed in order to address the current TM and TD challenges and to meet the needs of individuals organizations and governments In particular in this book we provide different perspectives of current status of TM and TD practices in select countries across the world Our aim is to provide scholars and practitioners interested in the topic with a better understanding of TM and TD practices and an overview of factors that affect these practices Once we understand the different challenges practitioners and leaders can use TM and TD as a source of power or a strategy that can lead people and organizations into success

Quantum Precision Measurement and Cold Atom Physics Jingbiao Chen, Xuzong Chen, Fang Fang, Hong Guo, Zhiwen Liu, Yanhui Wang, Xiaoji Zhou, 2022-09-23

Ever since the invention of the cesium atomic clock in 1955, quantum frequency standards have seen considerable development over the decades as a representative of quantum precision measurement. The progress in frequency measurements achieved in the past allowed one to perform quantum precision measurements of other physical and technical quantities with unprecedented precision whenever they could be traced back to a frequency measurement. Using atomic transitions as frequency reference, quantum frequency standards are far less susceptible to external perturbations and the identity of microscopic particles allows easy replication of a quantum standard with the same frequency. With laser cooling and trapping, cold atomic ensembles eliminate Doppler shift broadening and have become the go-to quantum reference when precision and new physics are pursued. The advancement of laser cooling and cold atom physics, in addition to novel physical matter states such as Bose-Einstein Condensation, give rise to new experimental techniques in quantum precision measurement, especially quantum frequency standards such as cesium fountain clocks dictating the SI second as well as optical lattice clocks and single ion optical clocks pushing the frontier of quantum metrology. Other areas of quantum metrology such as gravimeters and magnetometers also benefit greatly from cold atoms. For practical applications, quantum frequency standards are usually required to be compact and portable, and thermal atoms in the form of atomic beams or vapor cells are utilized. Commercially available quantum frequency standards such as cesium beam clocks or rubidium clocks have become the cornerstone of navigation and timekeeping. Compact optical clocks based on various laser spectroscopic techniques have also been developed. As researchers strive to break through the limits of accurate quantum measurement and atomic temperature, new fields such as precise measurement, quantum computing, and quantum simulation based on cold atoms are further opened up, and challenges still exist to explore new physical phenomena in the field of cold atoms. In honor of Prof. Yiqiu Wang on the occasion of his 90th birthday, the main goal of this Research Topic is to provide a platform to

exhibit the recent achievements and reveal the future challenges in quantum precision measurement as well as studies of cold atom physics with quantum metrology closely related to the long term scientific research areas of Prof Yiqiu Wang Both Original Research and Review articles are encouraged Topics of interest to this collection include but are not limited to Quantum precision measurements Microwave atomic clocks and their applications Optical frequency standards laser spectroscopy and their applications Quantum measurement based on cold atom Quantum computation and quantum simulation based on cold atom

Secrecy, Law and Society Greg Martin, Rebecca Scott Bray, Miiko Kumar, 2015-05-08 Commentators have shown how a culture of security ushered in after the terrorist attacks of 11 September 2001 has involved exceptional legal measures and increased recourse to secrecy on the basis of protecting public safety and safeguarding national security In this context scholars have largely been preoccupied with the ways that increased security impinges upon civil liberties While secrecy is justified on public interest grounds there remains a tension between the need for secrecy and calls for openness transparency and disclosure In law secrecy has implications for the separation of powers due process and the rule of law raising fundamental concerns about open justice procedural fairness and human rights Beyond the counterterrorism and legal context scholarly interest in secrecy has been concerned with the credibility of public and private institutions as well as the legacies of secrecy across a

range of institutional and cultural settings By exploring the intersections between secrecy law and society this volume is a timely and critical intervention in secrecy debates traversing various fields of legal and social inquiry It will be a useful resource for academic researchers university teachers and students as well as law practitioners and policymakers interested in the legal and socio legal dimensions of secrecy
