The Tornadoes at Dallas, Tex., April 2, 1957 Walter H. Hoecker, United States. Weather Bureau, 1960 The study of the tornadoes of April 2 1957 at Dallas Tex presented here is an assembly of independent efforts on some of the important aspects of these tornadoes and the associated weather situation Each serves as a separate report on a specific aspect of the Energy Research Abstracts, 1977 Semiannual with semiannual and annual indexes References to all scientific and technical literature coming from DOE its laboratories energy centers and contractors Includes all works deriving from DOE other related government sponsored information and foreign nonnuclear information Arranged under 39 categories e g Biomedical sciences basic studies Biomedical sciences applied studies Health and safety and Fusion energy Entry gives bibliographical information and abstract Corporate author subject report number indexes **Prediction of the Pressure** Fluctuations Associated with Maneuvering Reentry Weapons Anthony L. Laganelli, 1984 An experimental program was conducted at the AEDC von Karman facility Tunnels A and B in which acoustic pressure fluctuation data were acquired on a 7 degree half cone angle model featuring a control surface The objective was to define the aeroacoustic environment applicable to re entry vibration response analysis for both ballistic and maneuvering vehicles Wind tunnel measurements were obtained at Mach 4 and 8 for several values of freestream Reynolds number and model angle of attack Stationary zones of laminar transitional and turbulent flow over the model were achieved Acoustic data were reduced to rms fluctuating pressure and power and cross power spectral densities Results were normalized using local boundary layer parameters for comparison with previous high speed measurements The present study re examined the aeroacoustic environment prediction capability relative to compressible flow conditions Moreover boundary layer characteristic lengths and velocities were reviewed in order to develop normalization procedures required for development of appropriate aeroacoustic scaling laws It was determined that fluctuating pressure characteristics described by incompressible theory as well as empirical correlations could be modified to a compressible state through a transformation function In this manner compressible data were transformed to the incompressible plane where direct use of more tractable prediction techniques are available for Gas Turbine Heat Transfer and Cooling Technology, Second Edition Je-Chin engineering design analyses Han, Sandip Dutta, Srinath Ekkad, 2012-11-27 A comprehensive reference for engineers and researchers Gas Turbine Heat Transfer and Cooling Technology Second Edition has been completely revised and updated to reflect advances in the field made during the past ten years The second edition retains the format that made the first edition so popular and adds new information mainly based on selected published papers in the open literature See What's New in the Second Edition State of

the art cooling technologies such as advanced turbine blade film cooling and internal cooling Modern experimental methods for gas turbine heat transfer and cooling research Advanced computational models for gas turbine heat transfer and cooling performance predictions Suggestions for future research in this critical technology The book discusses the need for turbine cooling gas turbine heat transfer problems and cooling methodology and covers turbine rotor and stator heat transfer issues including endwall and blade tip regions under engine conditions as well as under simulated engine conditions It then examines turbine rotor and stator blade film cooling and discusses the unsteady high free stream turbulence effect on simulated cascade airfoils From here the book explores impingement cooling rib turbulent cooling pin fin cooling and compound and new cooling techniques It also highlights the effect of rotation on rotor coolant passage heat transfer Coverage of experimental methods includes heat transfer and mass transfer techniques liquid crystal thermography optical techniques as well as flow and thermal measurement techniques The book concludes with discussions of governing equations and turbulence models and their applications for predicting turbine blade heat transfer and film cooling and turbine blade Cases Determined in the St. Louis and the Kansas City Courts of Appeals of the State of internal cooling **Missouri** Missouri. Klein, United States. Weather Bureau, 1965 Five day mean and daily meteorological data observed since 1949 are analyzed empirically in order to derive useful climatological and forecasting relationships between surface weather elements and the circulation pattern The synoptic climatology of 5 day precipitation surface temperature 700 1000 mb thickness and sea level pressure is investigated by constructing fields of simple linear correlation between these elements and the simultaneous anomaly of 700 mb height over North American and adjacent oceans The relation of precipitation and temperature to the field of sea level pressure is studied in a similar fashion On the basis of the analogy are drawn concerning the association between each weather element and other meteorological factors Schematic models are then constructed showing preferred portions of the circulation pattern at 700 mb and sea level for opposite extremes of weather in different parts of the United States Research Paper ,1965 The Prediction and Control of Organized **Crime** James O. Finckenauer, Jennifer L. Schrock, 2003-12-01 Like most former Soviet republics Ukraine has experienced a formidable proliferation of crime and corruption as it struggles with economic reform and the establishment of democracy During the early 90s Ukraine became one of the primary recipients of foreign assistance from the United States and its crime and corruption situation was increasingly seen as an impediment to economic transition and achieving a more democratic way of life Thus in 1998 as part of a larger U S law enforcement assistance effort in Ukraine the idea for a research partnership between criminologists and legal scholars in the two countries was born in this volume The original research papers contained are the products of this ambitious research project. The realities of crime in post Soviet Ukraine as well as

divergent methodological approaches and communication problems presented the research partners with enormous challenges This volume represents the culmination of that collaborative effort and provides a singular look into the current crime situation in Ukraine and into the potential global threat presented by Ukrainian organized crime Contributions include analyses of the prediction and control of organized crime trafficking in women and children for sexual exploitation international money laundering the transnational political criminal nexus of trafficking in women countermeasures against economic crime and corruption heroin trafficking business victimization by organized crime and understanding and combating organized crime The Prediction and Control of Organized Crime will be critical reading for security planners policymakers and criminal justice officials as well as comparative criminologists legal scholars and political scientists interested in organized crime and political corruption Geological Survey Water-supply Paper ,1985 Geological Survey Professional Papers ,1965 **Storm on the Horizon** Justus D.
