Keystone Biology Remediation:

Environmental Pollutants in the Mediterranean Sea: Recent Trends and Remediation Approaches Tamer El-Sayed Ali, 2023-09-27 Pollution of the aquatic environment is a real threat across the globe. It is becoming a topic of intense study for researchers. It has been updated and almost completely revised. The Mediterranean Sea has been recognized as a target hotspot of the world as the pollutant concentration in this region is greater than the levels in other oceans. The book summarizes research on marine pollutants in the Mediterranean Sea. It presents 5 concise reviews focusing on microplastics, rare earth elements, and biotoxins, which are now commonly found in the region. The Editors also emphasize pollution problems in the Mediterranean region with 2 chapters presenting studies on Lebanon and Morocco respectively. The book adds to the collective information on Mediterranean marine pollution. Additionally, references are included at the end of each chapter for the benefit of advanced readers. The contributions also include discussions on important techniques used to monitor and control marine pollution, such as the bio-monitoring of effluents and ecological impact assessment of microplastic pollution on fish and the environment.

Rhizomicrobiome Dynamics in Bioremediation Vivek Kumar, 2021-04-19 Intensified agrarian and industrial activity has led to earth's soil and groundwater resources becoming polluted with hazardous materials. Bioremediation delivers a green technology using dynamics of living organisms, typically bacteria, fungi, microalgae, and also plants, to eliminate contaminants from ecosystems. This biological know-how is not only cost-effective compared to conventional physico-chemical approaches but also very successful and is being employed in the field. This book focuses on important issues for several critical and common environmental pollutants, resulting in a compilation having recent updates on the bioremediation applications towards green and clean environment. This volume also describes updates on various novel approaches of bioremediation, including nanotechnology, rhizomicrobiome technology, composting, metagenomics, and biosurfactants-based bioremediation. This volume is a resource for researchers, environmentalists, professionals, and policy makers.
