utilizing new insights provided by supersymmetry It is shown that each of the concepts has its analogue in the non relativistic
case Indeed the non relativistic case is developed first in order to introduce the new concepts in a familiar context The
symmetry of the non relativistic model is already present in the classical limit so the classical Kepler problem is first
discussed in order to bring out the role played by the Laplace vector one of the central concepts of the whole book Analysis of
the concept of eccentricity of the orbits turns out to be essential to understanding the relation of the classical and quantum
mechanical models The opportunity is taken to relive the great moments of physics From Kepler s discovery of the laws of
motion of the planets the development is traced through the Dirac equation up to modern advances which bring the concepts
of supersymmetry to bear on the derivation of the solutions a **Bulletin** University of Guyana, Georgetown,1967
