Formulated Theory Of Personality Description Of The Theory:

Enhancing Clinical Case Formulation Patrick Ryan, 2019-12-05 Clinical formulation lies at the heart of how mental health professionals understand psychological distress. It is the application of a framework that cohesively integrates scientific knowledge with the symptoms of distress. In essence, it is the creation of order to what is often experienced as disorder. The aim of this book is to bring awareness to the theoretical and practical opportunities for mental health professionals that exists by using atypical information when adapting typical formulation models. Each chapter reflects some variation in how formulation is defined, conceptualised, and practiced by using information that regularly materializes from professional encounters but often is omitted from the formulation of a particular presenting problem. Chapters on diet and exercise, sleep, spirituality, sexuality, and meaning making highlight how approaches to formulation can be extended to provide additional opportunities for intervention for the client and practitioner. A professional encounter orientated in the manner proposed will generate a type of formulation that will raise interesting and testable hypotheses that can assist in understanding stuck points in therapy, difficulties within the therapeutic relationship, low motivation, or inability to engage in particular approaches and will assist in devising person-specific mental health interventions. This book will appeal to clinical psychologists and psychotherapists in practice and training.

A Systemic-Structural Theory of Activity Gregory Bedny, Waldemar Karwowski, 2006-07-27 While its importance is widely recognized, the theoretical basis and practical applications of Activity Theory have not yet been firmly established in the field of human factors and ergonomics, experimental and work psychology. This book presents the foundations of the systemic structural theory of human activity. It contains multiple practical examples of systemic structural theory of activity analyses, including a study of production operations in the manufacturing environment, system safety evaluation, work improvement, equipment design, robot system performance, and design of human computer interaction tasks in the context of training efficiency, work motivation, fatigue, personality, and individual style of performance.

A Configuration Approach to Mindset Agency Theory Maurice Yolles, Gerhard Fink, 2021-07-29 This book explains psychological, sociopolitical, and organisational change in multidisciplinary settings. It shows how advanced techniques of contextual analysis can be applied to complex situations and offers a new cybernetic agency paradigm based on living systems theory. It models, diagnoses, and analyses complex real-world situations to anticipate patterns of behaviour.
