Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

On the night of a Full Moon, Mary decides to do an experiment with **gravity**. At midnight, she climbs into her backyard tree house, leans out the window, and holds an acorn as high as she can. She lets go and is disappointed to see the acorn plummet back down to Earth.

1. Why did the acorn fall to Earth instead of rising up to the Moon? **The force of Gravity**
2. Give two reasons why we feel Earth's gravity more strongly than the Moon's gravity.

We are on Earth so the force will always be stronger and the Earth is bigger than the moon

Gizmo Warm-up

From acorns to apples, gravity causes nearly any object to fall to Earth's surface. Gravity also causes the Moon to orbit Earth and Earth and the other planets to orbit the Sun. The Gravitational Force Gizmo allows you to explore the factors that influence the strength of gravitational force.

To begin, turn on the **Show force vector** checkboxes for objects A and B. The arrows coming from each object are **vectors** that represent gravitational **force**. The length of each vector is proportional to the force on each object.

1. Move object **A** around. As object **A** is moved, what do you notice about the direction of the two force vectors? **They stayed together**
2. How do the lengths of the two vectors compare? **The closer they get the longer they'll get**
3. Drag object **A** closer to object **B**. How does this change the gravitational force between the two objects? **It increases them**

New Scientist ,2007 **New Scientist and Science Journal** ,2007-10 **Gravitational, Magnetic, and Electric Forces: Examining Interactions** Daniel R. Faust,2019-12-15 Why do objects fall toward the ground What makes electric lights go on when we flip a switch How do magnets work The answers to these questions and many more become clear when you understand how electromagnetic force and gravitational force operate This book looks at these forces and presents key concepts in an accessible way Important theories and applications are presented in simple age appropriate language Full color photographs and primary sources provide readers with additional information Gravitational Theory Edited by Paul F. Kisak,2015-12-25 Gravity or gravitation is a natural phenomenon by which all things with mass are brought towards or gravitate towards one another including stars planets galaxies and even light and sub atomic particles Gravity is responsible for the complexity in the universe by creating spheres of hydrogen where hydrogen fuses under pressure to form stars and grouping them into galaxies Without gravity the universe would be an uncomplicated one existing without thermal energy and composed only of equally spaced particles On Earth gravity gives weight to physical objects and causes the tides Gravity has an infinite range and it cannot be absorbed transformed or shielded against Gravity is most accurately described by the general theory of relativity proposed by Albert Einstein in 1915 which describes gravity not as a force but as a consequence of the curvature of space time caused by the uneven distribution of mass energy and resulting in time dilation where time lapses more slowly in strong gravitation However for most applications gravity is well approximated by Newton s law of universal gravitation which postulates that gravity is a force where two bodies of mass are directly drawn or attracted to each other according to a mathematical relationship where the attractive force is proportional to the product of their masses and inversely proportional to the square of the distance between them This is considered to occur over an infinite range such that all bodies with mass in the universe are drawn to each other no matter how far they are apart This book describes the force of gravity and the various laws and theories used to model the gravitational force **An Experiment Concerning Electrically Induced Gravitational Force** Andreea Dimofte,1999 **Periodic Variations of the Gravitational Force** L. P. Geldart,California Institute of Technology. Division of Geological and Planetary Sciences,1949
