do governmental agencies and the design industry actually measure sustainable initiatives and environmental impacts This book breaks down the technical vocabulary and principles that define environmentally sustainable choices across interior and exterior architectural products to help the reader understand Material ingredient selection Energy and water use Emissions including greenhouse gases Human health and toxicity Social accountability assessment This guide explains the structure of green certifications standards and ecolabels life cycle assessment environmental regulations and more It presents a historic timeline for context and a snapshot of current trends and future objectives It is a comprehensive reference for interior designers architects building owners contractors and students enrolled in interior design and architecture *PPI NCIDQ Interior Design Reference Manual, Seventh Edition eText - 1 Year* David Kent Ballast,2021-06-18 Comprehensive review for all three exam sections The Interior Design Reference Manual by David Ballast covers all three sections of the NCIDQ exams Pass your exams the first time with comprehensive reading materials on all topics The NCIDQ Interior Design Reference Manual features include Complete coverage of content areas for all three sections of the NCIDQ Exam Updated for the IBC 2018 changes included in the exam Over 200 figures in SI and U S measurements to illustrate design details Study guidelines exam tips and tables to support exam preparation New for this edition revised and updated content to increase exam specification coverage Topics Covered Design Concepts and Programming Design Constraints Building Systems and Construction Research Analysis and Selection of Products and Details Communication and Documentation Project and Business Management eTextbook access benefits include Ability to download the entire eTextbook to multiple devices so you can study even without internet access An auto sync feature across all your devices for a seamless experience on or offline Unique study tools such as highlighting in six different colors to tailor your study experience Features like read aloud for complete hands free review **Tiled Steam Room and Steam Shower Technical Design Manual** LATICRETE International,2007-08 **Comparison of energy efficient and green buildings** Shrestha, Shritu,2016-04-18 The adverse environmental impacts from inefficient building construction increase if measures to reduce energy and resource use through stringent building policies and efficient technology are not implemented in developed and developing countries To illustrate a holistic approach to reducing buildings energy and resources the comparison of energy efficient and green buildings in terms of their technological aspects and their policy context in developed and developing countries mainly in Europe the USA and India is presented together with a policy package recommendation for Nepal A quality review of multiple literature sources supported by various expert opinions were the methods used for this in depth analysis It discusses that mandatory building standards voluntary labels information instruments and financial incentives are the most effective combination for the shift towards market transformation that results in a higher share of energy efficient and green buildings The lesson such as higher compliance with and enforcement of building energy standards can be seen in developed countries e g Germany Looking at a building s life cycle perspective it is not sufficient to focus solely on operational energy reduction

in higher energy efficient buildings as this is achieved by the increased use of energy intensive materials Green requirements must be considered in updating building energy standards and labels particularly for developed countries Green building certification will also become more effective when the stringency of energy standards is higher and when the whole building life cycle assessment is considered Due to the increasing scarcity of energy and resources many developing countries are forced to face up to the need for holistic green buildings Although baseline standards are not as high as in most developed countries and national financial support is low the gradual move towards making the standards more stringent and incorporating the wider scope of resource saving are positive developments in developing countries e g India However to achieve significant success strategies must include the establishment of a suitable funding environment a political commitment and a strong government vision for long term and sustainable building construction The challenges faced by Nepal are even greater due to the fast pace of urban growth and the absence of energy and resource efficient buildings policies highlighting the need for an effective policy package Overall this dissertation demonstrates how energy efficient and green buildings are interlinked Green buildings reinforced with higher levels of energy efficiency and energy efficient buildings incorporating green requirements are stepping stones for achieving greater building energy and resource efficiencies And a suitable policy package fosters its development
