Green Chemistry Theory And Practice:

Green Chemistry Paul T. Anastas, John Charles Warner, 2000-01-01 As the summary of a vision the book is brilliant One can feel the enthusiasm of the authors throughout I see it as a vehicle for initiating a fruitful dialogue between chemical producers and regulatory enforcers without the confrontation which often characterizes such interactions Martyn Poliakoff **Green Chemistry** February Its is an introductory text taking a broad view and intergrating a wide range of topics including synthetic methodologies alternative solvents and catalysts biosynthesis and alternative feedstocks There are exercises for students and the last chapter deals with future trends Aslib **Green Chemistry** István T. Minority Report William T. Lynch, 2020-10-16 In Philip K Dick's The Minority Report precogs who are imaginary individuals capable of seeing the future are relied upon to stop crime with a consensus report synthesized from two of three precogs When the protagonist is indicted for a future murder he suspects a conspiracy and seeks out the minority report detailing the suppressed testimony of the third precog Science works a lot like this science fiction story Contrary to the view that scientists in a field all share the same paradigm as Thomas Kuhn famously argued scientists support different and competing research programs Statements of scientific consensus need to be actively synthesized from the work of different scientists Not all scientific work will be equally credited by science as a whole While this system works well enough for most purposes it is possible for minority views to fail to get the hearing that they deserve This book analyzes the support that should be given to minority views reconsidering classic debates in science and technology studies and examining numerous case studies

Green Chemistry Strategies for Drug Discovery Emily A. Peterson, Julie B. Manley, 2015-06-11. The incorporation of Green Chemistry is a relatively new phenomenon in the drug discovery discipline since the scale that chemists operate on in drug discovery is smaller than those of process and manufacturing chemistry. The necessary metrics are more difficult to obtain in drug discovery due to the diversity of reactions conducted. However, pharmaceutical companies are realizing that incorporation of green chemistry techniques at earlier stages of drug development can speed the development of a drug candidate. Written by experts who have pioneered green chemistry efforts within their own institutions, this book provides a practical guide for both academic and industrial labs wanting to know where to start with introducing greener approaches for greatest return on investment. The Editors have taken a comprehensive approach to the topic, covering the entire drug discovery process from molecule conception through synthesis, formulation, and toxicology, with specific examples and case studies where green chemistry strategies have been implemented. Emerging techniques for performing greener drug discovery chemistry are addressed as well as cutting edge topics like biologics discovery and continuous processing. Moreover, important surrounding issues such as intellectual property are included. This book serves as a practical guide for both academic and industrial chemists who work across the breadth of the drug discovery discipline. Ultimately, readers will learn how to incorporate green chemistry strategies into their everyday workflow without slowing down their science.

Green Chemistry and Agro-food Industry: Towards a Sustainable Bioeconomy Stéphanie Baumberger, 2024-04-22. The objective of the book is to show the complementarity and integration of food and non-food value chains for the development of a sustainable bioeconomy. One current challenge facing industry and the economy is to meet the needs of a growing world population while preserving the environment. The use of fossil energy resources for several decades has generated a decrease in reserves of these resources together with a phenomenon of global warming due to the release of greenhouse gases into the atmosphere. More and more industrial sectors, including the chemical industry, are replacing fossil carbon with renewable carbon. The bioeconomy consists in using renewable biological resources to produce food, materials, and energy. A bioeconomy based on green chemistry and biotechnologies is developing worldwide as a lever for reducing the ecological footprint of human activities. The book is articulated around six parts, each dedicated to a keystone of the interface between green chemistry and the Agro Food Industry.
