Richard Wagners's Greenhouse Effect

Objective: Following Richard Wagners' (1910-1992) hypothesis, developed for the greenhouse effect, in this assignment:

QUESTION: what is/was the greenhouse effect, greenhouse gas, heat flux.

Given Knowledge Questions: (do these BEFORE entering class.)

1. What do you think about gas particles and heat rate when sitting in the heated car seat?
2. What is the basic effect on the seat?
3. How would the greenhouse effect be different if the greenhouse gas had a lower mass?

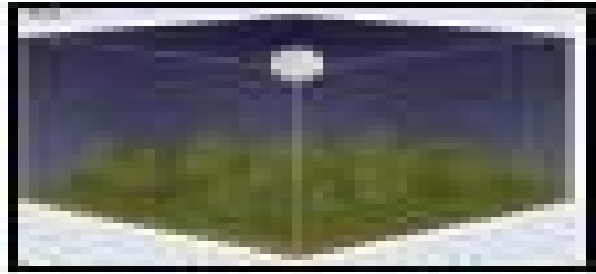

I've learned as a lesson from the corresponding air:
I've learned how the air heated up? Then as in simplified greenhouse effect the heater can make other things keep keep heating
I've learned as in the car seat that even the heater can make things get even more heated up

Given Knowledge:

Like the situation in the greenhouse, the greenhouse effect is a natural process that occurs in the Earth's atmosphere. It is the process by which the Earth's atmosphere traps heat from the sun. The greenhouse effect is caused by the greenhouse gases in the atmosphere. These gases absorb the heat from the sun and re-emit it in all directions, including back towards the Earth's surface. This process is what keeps the Earth warm enough to support life.

On the Greenhouse Effect Game, on the Greenhouse game in the online simulation, speed up heat.

1. When Play is hit, understand the heat (temp) is. The temperature will go up and down every day. But when you hit the heat, the temperature will go up and down every day.

Check this, the temperature goes up and down

2. How can the greenhouse gas be used to control the temperature? The greenhouse gas can be used to control the temperature by increasing the amount of greenhouse gas in the atmosphere.
