Leins-Zurmuehle,2021-10-11 The software industry is regarded as one of the most creative and dynamic industries in the world At the same time sheltering software through copyright and patent law has been a major point of contention for the past 40 years This doctoral thesis aims to provide new insights to this discussion Through the use of sociological methodology it supplies the necessary basic scientific research regarding how software is developed and commercialized nowadays Based on these findings it then legally evaluates to what extent copyright and patent law are able to reflect these structures and determines how an optimal protection scope for computer programs could look like today This doctoral thesis on one hand offers novel insights and points of view on existing legal doctrines It further acknowledges as well as legally qualifies some prevailing trends in the software industry such as Scrum and continuous delivery that have so far been largely unaddressed by copyright and patent law

The relationship

between music and language

Lutz Jäncke, Traditionally music and language have been treated as different psychological faculties This duality is reflected in older theories about the lateralization of speech and music in that speech functions were thought to be localized on the left and music functions on the right hemisphere But with the advent of modern brain imaging techniques and the improvement of neurophysiological measures to investigate brain functions an entirely new view on the neural and psychological underpinnings of music and speech has evolved The main point of convergence in the findings of these new studies is that music and speech functions have many aspects in common and that several neural modules are similarly involved in speech and music There is also emerging evidence that speech functions can benefit from music functions and vice versa This new research field has accumulated a lot of new information and it is therefore timely to bring together the work of those researchers who have been most visible productive and inspiring in this field and to ask them to present their new work or provide a summary of their laboratory s work
