dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found. Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions. Because this knowledge base crosses many different disciplines, introduction to caring for the intensive care patient while exciting may also be intimidating. This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful. The book contains three components: 1. description of the procedural tasks commonly performed for the critically ill patient; 2. explanation of the most common pathophysiologic states encountered; and 3. description of specific disease entities with details of their differential diagnosis, diagnostic strategy, and therapeutic plan. This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks. Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy. As an additional study aid, margin notes highlight important teaching points and facilitate easy review of chapter content. To consolidate the principles outlined in each chapter, review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader.

Nutrition and Critical Care Luc A. Cynober, Frederick A. Moore, 2003. A complete state-of-the-art manual on nutritional support for ICU patients, the present book written by internationally renowned specialists addresses fundamental aspects of the pathophysiological response to injury as well as practical issues of nutritional care. New features include an analysis of gene polymorphism and its possible consequences for the survival of traumatized patients. A better understanding of this process could become a basis for defining new nutritional strategies. Hence the discussion on indications for immune-enhancing diets. Of special interest is the research on copathologies, i.e., obesity, which can change the prognosis of ICU patients who thus require specific nutritional support. Entirely new is the merging of the recommendations of international and national societies, e.g., ASPEN, ESPEN, first realized for this publication. This book is a basic tool for any professional in the field of nutritional care for ICU patients: intensivists, surgeons, pharmacists, dietitians, and PhD students.
