Student Exploration: Ideal Gas Law

Vocabulary: atmosphere, Avogadro's law, Boyle's law, Charles's law, dependent variable, directly proportional, Gay-Lussac's law, ideal gas, ideal gas constant, ideal gas law, independent variable, inversely proportional, Kelvin temperature scale, kilopascal, mole, pressure, proportionality, STP, volume

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

- Why is it often necessary to add air to your car tires during the winter? Air expands when heated and contracts when cooled – as ambient temperatures get colder, the tires' inflation pressure is going down.

- Why do you think it might be a bad idea to throw an aerosol can into a fire?

Throw an aerosol can into a fire will boil all the liquid contents into gases, which will at that point be highly compressed. Even if the valve ruptures and the contents begin venting, the internal pressure will rapidly build to the point that the can will rupture explosively.

Gizmo Warm-up

The *Ideal Gas Law* Gizmo shows molecules moving within a chamber fitted with a movable piston. As the piston moves up and down, the **volume** of the chamber changes. Since gases expand to fill their container, any changes in the volume of the chamber changes the volume of the gas within.

- Next to **Dependent variable**, check that **Volume** is selected. Using the green slider, change the **pressure**. Note what happens to the temperature, volume, and amount of gas.

What changes? Volume What stays the same? Temperature temperature and amount of gas

- Using the purple slider on the tank of gas, adjust the number of **moles**, or amount of gas.

What changes? volume What stays the same? Pressure and temperature

Thermodynamics of Natural Systems Greg Anderson, 2017-04-27 Thermodynamics deals with energy levels and energy transfers between states of matter and is therefore fundamental to all branches of science This new edition provides an accessible introduction to the subject specifically tailored to the interests of Earth and environmental science students Beginning at an elementary level the first four chapters explain all necessary concepts via a simple graphical approach Throughout the rest of the book the author emphasizes the importance of field observations and demonstrates that despite being derived from idealized circumstances thermodynamics is crucial to understanding ore formation acid mine drainage and other real world geochemical and geophysical problems Exercises now follow each chapter with answers provided at the end of the book An associated website includes extra chapters and password protected answers to additional problems This textbook is ideal for undergraduate and graduate students studying geochemistry and environmental science

Making Things Happen James Woodward, 2005-10-27 In *Making Things Happen* James Woodward develops a new and ambitious comprehensive theory of causation and explanation that draws on literature from a variety of disciplines and which applies to a wide variety of claims in science and everyday life His theory is a manipulationist account proposing that causal and explanatory relationships are relationships that are potentially exploitable for purposes of manipulation and control This account has its roots in the commonsense idea that causes are means for bringing about effects but it also draws on a long tradition of work in experimental design econometrics and statistics Woodward shows how these ideas may be generalized to other areas of

science from the social scientific and biomedical contexts for which they were originally designed He also provides philosophical foundations for the manipulationist approach drawing out its implications comparing it with alternative approaches and defending it from common criticisms In doing so he shows how the manipulationist account both illuminates important features of successful causal explanation in the natural and social sciences and avoids the counterexamples and difficulties that infect alternative approaches from the deductive nomological model onwards Making Things Happen will interest philosophers working in the philosophy of science the philosophy of social science and metaphysics and as well as anyone interested in causation explanation and scientific methodology

The Top Books of the Year Ideal Gas Law And Answer Key The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the engaging narratives that have captivated audiences this year. Ideal Gas Law And Answer Key : Colleen Hoover "It Ends with Us" This heartfelt tale of love, loss, and resilience has gripped readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed. Ideal Gas Law And Answer Key : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This spellbinding historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Ideal Gas Law And Answer Key : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens weaves a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Pappen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a masterful and gripping novel that will keep you guessing until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
