

## Bungee Jumping (15.0%)

Suppose that the function

$$h(t) = 5t^3 - 25t^2 + 20t + 100$$

can be used to model the bungee jumper's height above the ground at time  $t$  in seconds.

Complete this table to answer the height of the jumper at a bungee jumper at given values of time  $t$  (in seconds).

$t$ (sec)	$h(t)$
0	100
1	105
2	100
3	105
4	100
5	105
6	100
7	105

Questions

1) Describe a graph graphing-calculus for this function.

Answer: Domain is  $t$ , Range is  $h(t)$  and  $h(t)$   
 $t$  has  $0 \leq t \leq 10$  and  $h(t)$  has  $100 \leq h(t) \leq 105$

2) How tall was the jumper when she first started jumping? How do you know?  
 and how? There are three values all mean  $t = 0$

3) The bungee jumper went up as high as the air before she started to fall (her rising feet shows the parachute when jump). Determine the points of the jump when?  
 $h(t) = 105$  seconds, the jumper was 105 ft in the air.  
 The jumper was jumping 105 ft at  $t = 1$  and  $t = 3$  and  $t = 5$  and  $t = 7$  and  $t = 9$

4) What is the lowest that the bungee jumper came to the ground? After how many seconds after the jumper started to jump?  
 $h(t) = 100$  seconds, the jumper was 100 ft above the ground

5) How many seconds was the bungee jumper falling from the jumping height up to the ground? How long was the jumper in the air?  
 Jumping height up  $h(t) = 105$  (the height) and how long was the jumper jumping to 100

6) Since the jumper through the point  $(4, 100)$ , it is correct to say: "At 4 or 4 seconds, the jumper is falling." However, this measurement says: "At 4 or 4.2 feet, the jumper is falling." Why?

There's a difference between  $t = 4$  or  $4.2$  and  $h(t) = 100$ , at which the height of the jumper is 100 feet. From graphing, we can see that  $h(t)$  is increasing, so the jumper is jumping at 4 seconds.

7) Evaluate the function at  $t = 7$ . Does this value make sense to the context of the problem? Explain your reasoning.

$h(7) = 105$  ft. This value is not a jump (because the jumper is jumping) because the jumper is jumping. There are several in the problem, the jumper is jumping at 105 ft and 100 ft (because  $h(t) = 105$  or  $100$ ).

*Christian Home Educators' Curriculum Manual* Cathy Duffy, 1997-11      *Teaching and Learning High School Mathematics* Charlene E. Beckmann, Denisse R. Thompson, Rheta N. Rubenstein, 2009-11-02 Too many high school students faced with mathematics in courses at the level of algebra and beyond find themselves struggling with abstract concepts and unwilling to pursue further study of mathematics When students curtail their course taking in mathematics they may be impacting their college and career options Thus high school mathematics teachers have the responsibility to help students recognize the value and importance of mathematics while also designing instruction that makes mathematics accessible to all students Ball and Bass 2000 as well as other mathematics educators have recognized that mathematics teachers not only need to know mathematics content and mathematics pedagogy i e teaching strategies but they also need to know how these ideas are integrated This mathematical knowledge for teaching is the knowledge that teachers of mathematics need and it differs from the knowledge that research or applied mathematicians must know This text is designed to provide teachers with insights into this mathematical knowledge for teaching Teaching and Learning High School Mathematics is likely different from many other texts that you have used It integrates both content and pedagogy to help you develop and build your own understanding of teaching The text is designed to help you develop deep conceptual understanding of fundamental mathematics Ma 1999 so that you are able to approach mathematics from multiple perspectives with many tools Such flexibility in teaching is essential if teachers are to help all students become mathematically proficient Throughout this book you are encouraged to work in cooperative teams This strategy is designed to help you develop a mathematics learning community and build a professional network that will be a valuable resource during your professional career Hopefully you will experience the benefits of engaging in rich mathematical discussions with peers and consider how to encourage such learning environments in your own classrooms Lesson planning is another element pervasive throughout this text To help teachers plan for effective student centered lessons the Question Response Support QRS Guide is introduced in Lesson 1 1 and used throughout the remainder of the lessons The QRS Guide is a tool on which teachers may record tasks or questions Q for students expected and observed student responses R and teacher support S in the form of additional just enough questions to support students in their progress on the task In each unit teachers expand their repertoire of teaching and learning elements and strategies and incorporate these elements as they plan additional lesson segments In Unit 4 lesson planning is formally introduced as teachers put together elements from previous units into complete cohesive lesson plans

Theory of Infinite Sequences and Series Ludmila Bourchtein, Andrei Bourchtein, 2022 This textbook covers the majority of traditional topics of infinite sequences and series starting from the very

beginning the definition and elementary properties of sequences of numbers and ending with advanced results of uniform convergence and power series The text is aimed at university students specializing in mathematics and natural sciences and at all the readers interested in infinite sequences and series It is designed for the reader who has a good working knowledge of calculus No additional prior knowledge is required The text is divided into five chapters which can be grouped into two parts the first two chapters are concerned with the sequences and series of numbers while the remaining three chapters are devoted to the sequences and series of functions including the power series Within each major topic the exposition is inductive and starts with rather simple definitions and or examples becoming more compressed and sophisticated as the course progresses Each key notion and result is illustrated with examples explained in detail Some more complicated topics and results are marked as complements and can be omitted on a first reading The text includes a large number of problems and exercises making it suitable for both classroom use and self study Many standard exercises are included in each section to develop basic techniques and test the understanding of key concepts Other problems are more theoretically oriented and illustrate more intricate points of the theory or provide counterexamples to false propositions which seem to be natural at first glance Solutions to additional problems proposed at the end of each chapter are provided as an electronic supplement to this book
