Jeffrey M. Wooldridge

Introduction To Econometrics Stock Watson 3rd Edition Test Bank:

Time Series Econometrics Klaus Neusser, 2016-06-14 This text presents modern developments in time series analysis and focuses on their application to economic problems The book first introduces the fundamental concept of a stationary time series and the basic properties of covariance investigating the structure and estimation of autoregressive moving average ARMA models and their relations to the covariance structure The book then moves on to non stationary time series highlighting its consequences for modeling and forecasting and presenting standard statistical tests and regressions Next the text discusses volatility models and their applications in the analysis of financial market data focusing on generalized autoregressive conditional heteroskedastic GARCH models The second part of the text devoted to multivariate processes such as vector autoregressive VAR models and structural vector autoregressive SVAR models which have become the main tools in empirical macroeconomics The text concludes with a discussion of co integrated models and the Kalman Filter which is being used with increasing frequency Mathematically rigorous yet application oriented this self contained text will help students develop a deeper understanding of theory and better command of the models that are vital to the field Assuming a basic knowledge of statistics and or econometrics this text is best suited for advanced undergraduate and beginning graduate students
