Human Frontiers Michael Bhaskar, 2021-11-02 Why has the flow of big world changing ideas slowed down A provocative look at what happens next at the frontiers of human knowledge The history of humanity is the history of big ideas that expand our frontiers from the wheel to space flight cave painting to the massively multiplayer game monotheistic religion to quantum theory And yet for the past few decades apart from a rush of new gadgets and the explosion of digital technology world changing ideas have been harder to come by Since the 1970s big ideas have happened incrementally recycled focused in

narrow bands of innovation In this provocative book Michael Bhaskar looks at why the flow of big world changing ideas has slowed and what this means for the future Bhaskar argues that the challenge at the frontiers of knowledge has arisen not because we are unimaginative and bad at realizing big ideas but because we have already pushed so far If we compare the world of our great great great grandparents to ours today we can see how a series of transformative ideas revolutionized almost everything in just a century and a half But recently because of short termism risk aversion and fractious decision making we have built a cautious unimaginative world Bhaskar shows how we can start to expand the frontier again by thinking big embarking on the next Universal Declaration of Human Rights or Apollo mission and embracing change

The Representational Theory of Capital Leonidas Zelmanovitz, 2020-11-18 This book proposes a representational theory of capital according to which there is a relation between capital goods in the real side of the economy and instruments representative of property claims on those goods in the abstract side Financial instruments are treated herein as a particularly liquid form of property claim The relation proposed between these two things is a loose rather than a direct one and the causes for and consequences of the looseness are explored in the book This book aims not merely to simplify our understanding of the relationship between things and claims to things but to make explicit and precise what many current researchers assume implicitly and consequently imprecisely This book will be a tool that researchers can apply to their own research in the form of a standard by which inconsistencies in the literature on Capital Theory can be identified Understanding what capital is requires delving into its nature on both the real and the abstract sides In regard to capital goods what they actually are is made clearer by the thesis that they exist on a spectrum with respect to consumer goods In going back to the philosophical and economic basics no claim is made of being comprehensive The argument is that a crucial idea for our understanding of what capital is that actual capital goods and processes and knowledge are represented in financial instruments and other property claims A formal treatment that lays out the philosophical and economic basics is necessary to put this idea across and the model proposed in the book is a first step in that direction Further by laying out the philosophical and economic basics of the theory the book offers the reader the reasons why having a clearer concept of capital is an important tool for wealth creation and why wealth creation is more than
