Educational Research Document Summaries Educational Research Information Center (U.S.),1966 **Elements of C**

Morton H. Lewin,2012-12-06 Statements in C like statements in any other programming language consist almost entirely of expressions and special reserved words Declarations in C unlike declarations in other languages also contain arbitrary

expressions Thus studying the means by which C expressions are constructed and evaluated is especially important particularly since the number of permissible C operators is so large Since all of the operands in a C expression excluding constants must be properly declared before they are used and since declarations themselves contain expressions the teaching of C involves the following chicken and egg problem Should one begin by considering only elementary declarations in which case the topic of expression construction and evaluation cannot be fully treated in one place because the operators that pertain to the more complex objects like pointers and structures whose declarations have not yet been introduced have not yet been covered or should one postpone entirely the issue of how declarations are written merely assuming that all of the objects under discussion have been properly declared in order to fully treat all types of operands and operators in one comprehensive discussion If the student is encouraged to begin writing programs immediately the former choice is mandatory because even the most elementary programs must contain proper declarations Thus most C textbooks postpone the discussion of objects like arrays structures and pointers and of the operators that pertain to them until the second half of the book is reached
