The Theory of New Classical Macroeconomics Peter Galbács, 2015-04-23 This book examines new classical macroeconomics from a comparative and critical point of view that confronts the original texts and later comments as a first dimension of comparison The second dimension appears in a historical context since none of the new classical doctrines can be analyzed ignoring the parallelism and discrepancies with the theory of Keynes Friedman or Phelps Radicalism of new classical macroeconomics has brought fundamental changes in economic thought but the doctrines got vulgarized and distorted thanks to the mass of followers Nowadays economic theory and policy trying to find their ways have a less clear relationship than ever Therefore this volume is aimed at mapping and reconsidering the policy instruments and transmission mechanisms offered by the new classicals Its central question points to the real nature of new classical macroeconomics what consequences are grounded by the assumptions new classicals used Moreover issues raised by automatic fiscal stabilizers and fiscal reforms are analyzed as well even if they were out of the range of classical texts The book draws a picture of new classical macroeconomics stressing the analogies with Keynesian countercyclical policies instead of the discrepancies commonly held

 introduction into parametric non and semiparametric regression that closes the gap between theory and application The
 most important models and methods in regression are presented on a solid formal basis and their appropriate application is
 shown through many real data examples and case studies Availability of user friendly software has been a major criterion for
 the methods selected and presented Thus the book primarily targets an audience that includes students teachers and
 practitioners in social economic and life sciences as well as students and teachers in statistics programs and mathematicians
 and computer scientists with interests in statistical modeling and data analysis It is written on an intermediate mathematical
 level and assumes only knowledge of basic probability calculus and statistics The most important definitions and statements
