

The book cover features a light blue background. In the upper left, there is a single orange and black butterfly. In the center, two butterflies are shown facing each other; the one on the left has its wings spread wide, revealing intricate patterns of orange, black, and white, while the one on the right has its wings partially closed. To the right of the butterflies, a multi-colored DNA double helix is depicted, winding its way across the page. The colors of the DNA strands include blue, green, red, and yellow. The overall design is clean and modern, with a focus on the natural and scientific themes represented by the butterflies and the genetic material.

Making Sense of Heritability Neven Sesardic, 2005-10-13 In this book Neven Sesardic defends the view that it is both possible and useful to measure the separate contributions of heredity and environment to the explanation of human psychological differences He critically examines the view very widely accepted by scientists social scientists and philosophers of science that heritability estimates have no causal implications and are devoid of any interest In a series of clearly written chapters he introduces the reader to the problems and subjects the arguments to close philosophical scrutiny His conclusion is that anti heritability arguments are based on conceptual confusions and misunderstandings of behavioural genetics His book is a fresh and compelling intervention in a very contentious debate
