

Forensic chemists capture and analyze physical evidence left behind at a crime scene. In which the people involved are identified and it is ascertained how and why this crime was committed.

You must have seen the Discovery Channel's Investigation Show, in which the crimes committed in the 1980s are investigated and then justice is done by punishing the guilty.

Technology was not so advanced in the 1980s and it was very difficult to ascertain from the evidence available. But today forensic science has developed so much that even if a small amount of evidence and still crime is detected.

The main reason for this is that today forensic chemists work on it. Forensic scientists use a variety of analysis methods such as chromatography, spectrometry, and spectroscopy.

## **Importance of Chemistry**

Chemistry is a subject that not everyone likes. There are only a few people who are passionate about it and study diligently.

They later become chemists. We find boring, it does not mean that it is a boring subject.

Its importance can be ascertained from the fact that the food we eat gives us strength, but what happens in the middle of it and how does food give us strength, when our health is bad, then how can we take medicine by taking medicine. The body recovers immediately.

When any part of our body gets injured, how is it cured with medicines?

So there are so many things that chemistry tells us about how important it is. That's why a boring subject can be for studies but it is very important for life.

So let us know what is the importance of chemistry and how it makes our life easier by being involved in many aspects of our life and eliminating the problems of our life.

---

### **Cooking:**

Chemistry tells us how food changes when it is cooked, how it moves, how food is preserved, how your body uses the food you eat, and the seasonings you add to food when it is cooked. How do I meet and change the taste of food?

---

### **Cleaning:**

Part of the importance of chemistry is how cleaning works. Use science to help decide what's best for food dishes, laundry.

When you use bleach and disinfectant, even water, you use chemistry. That's the chemistry of how it works.
