All-Optical Signal Processing Stefan Wabnitz, Benjamin J. Eggleton, 2015-04-11 This book provides a comprehensive review of the state of the art of optical signal processing technologies and devices It presents breakthrough solutions for enabling a pervasive use of optics in data communication and signal storage applications It presents optical signal processing as solution to overcome the capacity crunch in communication networks The book content ranges from the development of innovative materials and devices such as graphene and slow light structures to the use of nonlinear optics for secure quantum information processing and overcoming the classical Shannon limit on channel capacity and microwave signal processing Although it holds the promise for a

substantial speed improvement today's communication infrastructure optics remains largely confined to the signal transport layer as it lags behind electronics as far as signal processing is concerned This situation will change in the near future as the tremendous growth of data traffic requires energy efficient and fully transparent all optical networks The book is written by leaders in the field
