Science Fictions Stuart Ritchie, 2020-07-21 An insider s view of science reveals why many scientific results cannot be relied upon and how the system can be reformed Science is how we understand the world Yet failures in peer review and mistakes in statistics have rendered a shocking

number of scientific studies useless or worse badly misleading Such errors have distorted our knowledge in fields as wide ranging as medicine physics nutrition education genetics economics and the search for extraterrestrial life As Science Fictions makes clear the current system of research funding and publication not only fails to safeguard us from blunders but actively encourages bad science with sometimes deadly consequences Stuart Ritchie's own work challenging an infamous psychology experiment helped spark what is now widely known as the replication crisis the realization that supposed scientific truths are often just plain wrong Now he reveals the very human biases misunderstandings and deceptions that undermine the scientific endeavor from contamination in science labs to the secret vaults of failed studies that nobody gets to see from outright cheating with fake data to the more common but still ruinous temptation to exaggerate mediocre results for a shot at scientific fame Yet Science Fictions is far from a counsel of despair Rather it's a defense of the scientific method against the pressures and perverse incentives that lead scientists to bend the rules By illustrating the many ways that scientists go wrong Ritchie gives us the knowledge we need to spot dubious research and points the way to reforms that could make science trustworthy once again

A Critical Study of Thailand's Higher Education Reforms Rattana Lao, 2015-05-15 This book offers a critical examination of contemporary higher education reforms in Thailand situated in the broader historical socio economic and political changes Through a qualitative case study with three methods of inquiry this book explores why different global education policies such as quasi privatisation internationalization as quality assessment QA have resonated in Thailand's higher education sector Grounded in policy borrowing and lending this book uses the politics economics and culture of borrowing to analyse major reforms in Thailand for the past one hundred years It is argued that historical legacy policy contexts and belief systems of policy elites play pivotal roles in facilitating policy changes or the lack thereof While historical analysis elucidates that the Thai state has always been an active borrower of western ideas the perseverance of the Thai nationalism discourse has often been used to suggest its so called independence and idiosyncrasy This in depth analysis of the Thai case aims to contribute to the critical studies in Asian education comparative higher education policy borrowing and lending and Thai studies The Culture of Borrowing intensively studies the policy appropriation in the Thai education system by analysing Selective Borrowing and the Historical Development of Thai Higher Education The Asian Economic Crisis as Window of Opportunity Autonomous University Internationalization of Teaching Quantitative and Qualitative Challenges The Emergence of Quality Policies and their Rationales The Intended and Unintended Consequences of Quality Policies This book will appeal to researchers in Education particularly to scholars studying educational policies within the context of tertiary education It will also interest scholars specialising in Asian and South east Asian Studies

Technology and Science for the Ships of the Future A. Marinò, V. Bucci, 2018-06-22 In 1974 a scientific conference covering marine automation group and large vessels issues was organized under the patronage of the Technical Naval Studies Centre CETENA and the Italian National Research Council CNR A later collaboration with the Marine Technical

Association ATENA led to the renaming of the conference as NAV extending the topics covered to the technical field previously covered by ATENA national conferences The NAV conference is now held every 3 years and attracts specialists from all over the world This book presents the proceedings of NAV 2018 held in Trieste Italy in June 2018 The book contains 70 scientific papers 35 technical papers and 16 reviews and subjects covered include comfort on board conceptual and practical ship design deep sea mining and marine robotics protection of the environment renewable marine energy design and engineering of offshore vessels digitalization unmanned vehicles and cyber security yacht and pleasure craft design and inland waterway vessels With its comprehensive coverage of scientific and technical maritime issues the book will be of interest to all those involved in this important industry

High-skilled Migration Mathias Czaika, 2018 Political and scientific debates on migration policies have mostly focused on governments efforts to control or reduce low skilled asylum and irregular migration or to encourage the return migration of these categories Less research and constructive discourse has been conducted on the role and effectiveness of policies to attract or retain high skilled workers An improved understanding of the drivers and dynamics of high skilled migration is essential for effective policy making as most highly developed and emerging economies experience growing shortages of high skilled labour supply in certain occupations and sectors and skilled immigration is often viewed as one way of addressing these Simplistic assumptions that high skilled migrants are primarily in pursuit of higher wages raise the expectation that policies which open channels for high skilled immigration are generally successful Although many countries have introduced policies aimed at attracting and facilitating the recruitment of high skilled workers not all recruitment efforts have had the desired effects and anecdotal evidence on the effectiveness of these programmes is rather mixed The reason is that the rather narrow focus on migration policy coincides with a lack of systematic and rigorous consideration of other economic social and political drivers of migration which may be equally or sometimes even more important than migration policies per se A better understanding of migration policies their making consequences and limitations requires a systematic knowledge of the broader economic social and political structures and their interaction in both origin and destination countries This book enhances this vibrant field of social scientific enquiry by providing a systematic multidisciplinary and global analysis of policies driving international high skilled migration processes in their interaction with other migration drivers at the individual city national and international level

Ferris, Chin-Teng Lin, Scott Makeig, 2014-10-03 Decades of brain imaging experiments have revealed important insights into the architecture of the human brain and the detailed anatomic basis for the neural dynamics supporting human cognition However technical restrictions of traditional brain imaging approaches including functional magnetic resonance tomography fMRI positron emission tomography PET and magnetoencephalography MEG severely limit participants movements during experiments As a consequence our knowledge of the neural basis of human cognition is rooted in a dissociation of human cognition from what is arguably its foremost and certainly its evolutionarily most determinant function organizing our behavior so as to optimize its consequences in our complex multi scale and ever changing environment The concept of natural cognition therefore should not be separated from our fundamental experience and role as embodied agents acting in a complex partly unpredictable world To gain new insights into the brain dynamics supporting natural cognition we must overcome restrictions of traditional brain imaging technology First the sensors used must be lightweight and mobile to allow monitoring of brain activity during free participant movements New hardware technology for electroencephalography EEG and near infrared spectroscopy NIRS allows recording electrical and hemodynamic brain activity while participants are freely moving New data driven analysis approaches must allow separation of signals arriving at the sensors from the brain and from non brain sources neck muscles eyes heart the electrical environment etc Independent component analysis ICA and related blind source separation methods allow separation of brain activity from non brain activity from data recorded during experimental paradigms that stimulate natural cognition Imaging the precisely timed distributed brain dynamics that support all forms of our motivated actions and interactions in both laboratory and real world settings requires new modes of data capture and of data processing Synchronously recording participants motor behavior brain activity and other physiology as well as their physical environment and external events may be termed mobile brain body imaging MoBI Joint multi stream analysis of recorded MoBI data is a major conceptual mathematical and data processing challenge This Research Topic is one result of the first international MoBI meeting in Delmenhorst Germany in September 2013 During an intense workshop researchers from all over the world presented their projects and discussed new technological developments and challenges of this new imaging approach Several of the presentations are compiled in this Research Topic that we hope may inspire new research using the MoBI paradigm to investigate natural cognition by recording and analyzing the brain dynamics and behavior of participants performing a wide range of naturally motivated actions and interactions Science Education Research and Practices in Taiwan Mei-Hung Chiu, 2015-08-04 This book highlights the development and outcomes of research on and practical experience in science education in Taiwan As the outcomes of the scholarship on science education in Taiwan have garnered attention in science education communities around the world this book gathers the most relevant

Lesson Plan William G. Bowen, Michael McPherson, 2017-10-31 Why and how American colleges and universities need to change in order to meet the nation's pressing needs American higher education faces some serious problems but they are not the ones most people think In this brief and accessible book two leading experts show that many so called crises from the idea that typical students are drowning in debt to the belief that tuition increases are being driven by administrative bloat are exaggerated or simply false At the same time many real problems from the high dropout rate to inefficient faculty staffing have received far too little attention In response William G Bowen and Michael S McPherson provide a frank assessment of the biggest challenges confronting higher education and propose a bold agenda for reengineering essential elements of the system to meet them The result promises to help shape the debate about higher education for years to come Lesson Plan shows that for all of its accomplishments higher education today is falling short when it comes to vital national needs Too many undergraduates are dropping out or taking too long to graduate minorities and the poor fare worse than their peers reinforcing inequality and college is unaffordable for too many But these problems could be greatly reduced by making significant changes including targeting federal and state funding more efficiently allocating less money for merit aid and more to match financial need creating a respected teaching corps that would include nontenure faculty improving basic courses in fields such as math by combining adaptive learning and face to face teaching strengthening leadership and encouraging more risk taking It won't be easy for faculty administrators trustees and legislators to make such sweeping changes but only by doing so will they make it possible for our colleges and universities to meet the nation's demands tomorrow and into the future
