Uncertainty, Rationality, and Agency Wiebe van der Hoek, 2006-08-18 This book collects all the papers that appeared

in 2005 in Knowledge Rationality and Action KRA a journal published as a special section of Synthese which addresses contemporary issues in epistemic logic belief revision game and decision theory rational agency planning and theories of action As such the special section appeals to researchers from Computer Science Game Theory Artificial Intelligence Philosophy Knowledge Representation Logic and Agents addressing issues in artificial systems that have to gather information reason about it and then make a sensible decision about what to do next It will be clear already from the contents pages that this book indeed reflects the core of KRA the papers in this volume address degrees of belief or certainty and rational agency The latter has several manifestations often constraints on the agent's belief behaviour or decision making Moreover this book shows that KRA indeed represents a loop in the behaviour of the agent after having made a decision the life of the agent does not end rather it will do some sensing or collect otherwise the outcome of its decision to update its beliefs or knowledge accordingly and make up its mind about the next decision task

Multicriteria Decision Making Timothy Havranek, Doug MacNair, 2023-06-06 Public corporations and private businesses operate in an increasingly complex uncertain and interconnected world When evaluating investment decisions business managers can no longer base their decisions primarily on expected financial return They now must now consider a host of performance value measures i.e. criteria pertaining to issues such as environmental and social governance sustainability and stakeholder satisfaction In addition corporate managers must ensure that their investment decisions are aligned with the company's vision mission and values in order to maintain investor confidence and protect brand image Lastly to be truly successful business managers must assess the risks associated with each performance measure and manage their impacts during project implementation This book takes a pragmatic business and economics view towards evaluating competing investment alternatives and or capital project strategies It provides a practical step by step process using a structured decision analysis framework to evaluate understand quantify and measure project investment strategies in light of multiple stakeholder objectives and success criteria This process assists in helping stakeholders internal and external achieve a shared understanding of project issues and to facilitate convergence towards a mutually acceptable solution The approach considers available choices identified uncertainties constraints necessary tradeoffs and preferences so as to identify solutions that maximize overall benefits while minimizing overall costs and risk A real world case study is presented in the early chapters and the process steps are demonstrated through application to this case study Recent advances in technology allow for investment strategies to be evaluated against multiple criteria within one integrated platform This book guides the reader in performing multicriteria decision analysis including the use of Monte Carlo simulation within an MS Excel environment using native MS Excel and as well as add in programs such as Palisades Decision Tools suite Example model structures screen shots formulas and output results are provided throughout the book using an illustrative case study
