[Matter and Interactions I](#) Ruth W. Chabay, Bruce A. Sherwood, 2007 The overall goal of this calculus based text is to provide an introduction to physics with a modern point of view. It emphasizes the atomic nature of matter, macro

micro connections and modeling complex physical systems The approach is designed to go beyond low level physics and to build upon readers prior preparation The first volume deals with mechanics and thermal physics in a unified way with strong emphasis on atomic level description and analysis The ball and spring model of solids is a major theme culminating in computing the specific heat as a function of temperature for an Einstein solid using the concepts of statistical mechanics

Matter and Interactions II Ruth W. Chabay, Bruce A. Sherwood, 2002 A modern introduction to physics for advanced students this work focuses on the atomic structure of the material plus the links between macroscopic and microscopic phenomena Above all readers learn how to explain complex physical processes using simple models This second volume deals with the theory of electricity and magnetism as well as physical optics as understood by the classical interaction between light and material Electrostatics and currents are discussed in a simplified way using the electrical field and microscopic models
