inch rocket launcher also known as the super bazooka was introduced in early 1950 and saw considerable action throughout

the Korean War The success of the powerful German Panzerschreck 88mm anti tank rocket caused the United States to completely rethink the bazooka at the close of World War II Based on the Panzerschreck s design the M20 was significantly larger than the 2 36 inch bazooka of WWII Though bearing a superficial resemblance to the Nazi weapon the M20 had greater effective range power and accuracy The M20 was a two piece smooth bore weapon weighing only twelve pounds with an assembled length of sixty inches It fired a shaped charge that concentrated the force of the explosion on a very small area thus allowing the projectile to penetrate armor plate as thick as eleven inches It boasted a range of up to 900 yards In addition to the M20 model the Army produced further developments designated M20A1 A1B1 and M20B1 Similar to the M20 they boasted various simplified components including latch assemblies and in the case of the M20B1 aluminum barrels Created in 1961 this field manual reveals a great deal about the 3 5 inch rocket launcher M20A1 and M20A1B1 s design and capabilities Intended as a manual for those charged with operation and maintenance it details many aspects of its controls ammunition and sighting equipment Originally labeled restricted this manual was declassified long ago and is here reprinted in book form Care has been taken to preserve the integrity of the text     **Operator's manual** ,1984     The New Model Rocketry Manual George Harry Stine,1977 A manual that discusses building and launching model rockets for international competition recreation or scientific experiments     **NASA Saturn I/IB Launch Vehicles Owner's Workshop Manual** Dr. David Baker,2020-08-25 The Saturn I and IB series of rockets fulfilled plans developed in the late 1950s to build a rocket which could triple the existing thrust levels of US rockets and equal the lifting capacity of the Soviet Union launching satellites and spacecraft weighing more than 10 tonnes into Earth orbit and do it by the early 1960s These rockets emerged from the work carried out by former V 2 technical director Wernher von Braun working at the Army Ballistic Missile Agency in Huntsville Alabama Three times more powerful than anything launched by America to that date with a cluster of eight rocket motors for the first stage the first Saturn I flew on October 27 1961 and propelled America into the heavy lift business It was the Saturn I and its successor the Saturn IB with a more powerful second stage that did all the preparatory work getting NASA ready to put men on the Moon Between 1961 and 1975 the 19 flights of the Saturn I and IB achieved several historic firsts launching the world s first high energy liquid oxygen liquid hydrogen upper stages into orbit in 1964 the first unmanned test of suborbital and orbital Apollo spacecraft in 1966 the first unmanned test of the Lunar Module in 1968 the first manned Apollo spacecraft Apollo 7 also in 1968 all three Skylab flights in 1973 and the last Apollo spacecraft flown in support of the Apollo Soyuz Test Project in 1975     **Model Rocket Design Manual** Grant Boyd,1975     **Manual Description and Instructions for Use 4".5 Rocket Launcher MK7 (cit Type 8)** ,1944
