Ground Improvement Professor Jian Chu, Chalachat Rujikiatkamjorn, Buddhima Indraratna, 2005-11-07 The first book of its kind providing over thirty real life case studies of ground improvement projects selected by the world's top experts in ground improvement from around the globe Volume 3 of the highly regarded Elsevier Geo engineering book series coordinated by the Series Editor Professor John A Hudson FEng An extremely reader friendly chapter format Discusses wider economical and environmental issues facing scientists in the ground improvement Ground improvement has been both a science and art with significant developments observed through ancient history From the use of straw as blended infill with soils for additional strength during the ancient Roman civilizations and the use of elephants for compaction of earth dams during the early Asian civilizations the concepts of reinforced earth with geosynthetics use of electrokinetics and thermal modifications of soils have come a long way The use of large and stiff stone columns and subsequent sand drains in the past has now been replaced by quicker to install and more effective prefabricated vertical drains which have also eliminated the need for more expensive soil improvement methods The early selection and application of the most appropriate ground improvement techniques can improve considerably not only the design and performance of foundations and earth structures including embankments cut slopes roads railways and tailings dams but also result in their cost effectiveness Ground improvement works have become increasingly challenging

when more and more problematic soils and marginal land have to be utilized for infrastructure development This edited compilation contains a collection of Chapters from invited experts in various areas of ground improvement who have illustrated the basic concepts and the applications of different ground improvement techniques using real projects that they have been involved in The case histories from many countries ranging from Asia America Australia and Europe are addressed

Essential Physics for Manual Medicine E-Book Martin Ferrier Young, 2009-09-16 A textbook that covers Physical concepts at a basic level for manual therapists specifically Clinicians in general and manual therapists in particular have a need to understand certain specific aspects of physics to an advanced level However many lack prior education in this area with chemistry and biology A levels being emphasized in terms of entrance requirements Most textbooks aimed at this field concentrate exclusively on the physics underpinning biomechanics but the level at which these books are pitched is often too high to allow understanding by students who have an inadequate background in the subject This book acts in part as a primer to address this deficit Students are also required to understand the basic physics underpinning physiology biochemistry radiography and therapeutics This textbook will be a guide to these specialist areas of knowledge This text will cover biophysics as a core subject to guide the potential clinician from total ignorance to complete mastery in the areas of physics pertinent to manual medicine and its related disciplines Self assessment questions at the beginning of each chapter allow readers to check their existing knowledge prior to reading the chapter Each section builds from basic principles to advanced levels Clinical focus
