**Not Just for the Boys** Athene Donald, 2023-04-11 Why are girls discouraged from doing science Why do so many promising women leave science in early and mid career Why do women not prosper in the scientific workforce Not Just For the Boys looks back at how society has historically excluded women from the scientific sphere and discourse what progress has been made and how more is still needed Athene Donald herself a distinguished physicist explores societal expectations during both childhood and working life using evidence of the systemic disadvantages women operate under from the developing science of how our brains are and more importantly aren't gendered to social science evidence around attitudes towards girls and women doing science It also discusses how science is done in practice in order to dispel common myths for example the perception that science is not creative or that it is carried out by a lone genius in an ivory tower myths that can be very off putting to many sections of the population A better appreciation of the collaborative creative and multi disciplinary nature of science is likely to lead to its appeal to a far wider swathe of people especially women This book examines the modern way of working in scientific research and how gender bias operates in various ways within it drawing on the voices of leading women in science describing their feelings and experiences It argues the moral and business case for greater diversity in modern research the better to improve science and tackle the great challenges we face today **The**

*Spacecraft Dynamics and Control* The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator The design versus the uncertainty class is driven by analytic stability and performance inequalities The method is applied to several attitude and orbit control problems The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors Numerical tables are included and their data employed for numerical simulations Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application Simulated results and their graphical plots are
