Britain was losing its international industrial competitiveness has preoccupied governments since the Second World War  
Policymakers have sought to address this over the years and yet Britain s relative industrial decline has appeared to continue  
raising questions about its root causes In Search of Technological Excellence analyses the policymaking and policy  
implementation in the education of engineers and technologists from the 1945 report of the Percy Committee on Higher  
Technological Education to the conclusion of the Thatcher government s Enterprise in Higher Education Initiative Using a  
plethora of previously unpublished sources this book focuses on the untold story of what the reports of the three key  
committees in this fifty year period Percy 1945 Fielden 1963 and Finniston 1980 actually achieved in secondary and higher  
technological education The core themes of this volume include industrial training and its assessment the controversy over  
the structure of industrial sandwich courses the perceived requirements for qualified specialists the manpower controversy  
curriculum development creativity and innovation in engineering engineers as managers and engineering in schools Thought  
provoking and comprehensive In Search of Technological Excellence reflects on perennial problems to help clarify how this
