describes the experiences of engineers in support of combat operations and carrying out construction in a distant theater The performance of United States Army Engineers in Vietnam wrote General Harold K Johnson the Army chief of staff adds another brilliant chapter to their history The building effort in South Vietnam from 1965 to 1968 allowed the United States to deploy and operate a modern 500 000 man force in a far off undeveloped region Although the engineers faced enormous construction responsibilities the Army s top priority remained providing combat support to tactical operations As a result ground combat troops with their supporting engineers were able to fight the enemy from well established bases which gave U S and allied forces the ability to concentrate and operate when and where they wanted Although most of the construction was temporary more durable facilities including airfields port and depot complexes headquarters buildings communications facilities and an improved highway system were intended to serve as economic resources for South Vietnam The military engineers who supported the U S Army in Vietnam wrote a proud record of achievement that spanned nearly two decades of war Starting with a handful of advisers in the mid 1950s Army engineers landed in force with U S ground units in 1965 and before long numbered more than 10 percent of the U S Army troops committed to the fight Working in one of the world s harshest undeveloped regions and under constant threat from an elusive and determined foe the engineers met every test that came their way They built ports and depots for a supply line that reached halfway around the globe carved airfields and airstrips out of jungle and mountain plateaus repaired roads and bridges to clear the advance for the combat infantryman and constructed bases for an army whose communications grew in complexity with each passing year They were often found in the thick of the fighting and fought as infantrymen as part of a long tradition of fighting while building When the U S involvement in the Vietnam War began to wind down the engineers were given another demanding mission imparting to the South Vietnamese Army their specialized skills in construction and management They left in place a robust infrastructure to support the South Vietnamese as they vainly struggled for survival against the armored spearheads of the North Vietnamese Army Engineers at War is the eleventh volume published in the United States Army in Vietnam official series Like its companion volumes it forcibly reminds us that the American soldier in Vietnam was courageous infinitely adaptable and tireless in pursuit of the mission For the engineers that mission and their comrades sustained them in the best engineer tradition even as the political and popular will to sustain the fight diminished Their story and dedication should inspire all soldiers as they face a future of sustained operations around the world

Engineers at War Adrian Traas, United States Army, 2019-05-09

The military engineers who supported the U S Army in Vietnam wrote a proud record of achievement that spanned nearly two decades of war Starting with a handful of advisers in the mid 1950s Army engineers landed in force with U S ground units in 1965 and before long numbered more than 10 percent of the U S Army troops committed to the fight Working in one of the world s harshest undeveloped regions and under constant threat from an elusive and determined foe the engineers met every test that came their way They built ports and depots for a supply line that

reached halfway around the globe carved airfields and airstrips out of jungle and mountain plateaus repaired roads and bridges to clear the advance for the combat infantryman and constructed bases for an army whose communications grew in complexity with each passing year They were often found in the thick of the fighting and fought as infantrymen as part of a long tradition of fighting while building When the U S involvement in the Vietnam War began to wind down the engineers were given another demanding mission imparting to the South Vietnamese Army their specialized skills in construction and management They left in place a robust infrastructure to support the South Vietnamese as they vainly struggled for survival against the armored spearheads of the North Vietnamese Army Engineers at War is the eleventh volume published in the United States Army in Vietnam official series Like its companion volumes it forcibly reminds us that the American soldier in Vietnam was courageous infinitely adaptable and tireless in pursuit of the mission For the engineers that mission and their comrades sustained them in the best engineer tradition even as the political and popular will to sustain the fight diminished Their story and dedication should inspire all soldiers as they face a future of sustained operations around the world

Rosenthal, Jean E. Keith, Blanche D. Coll, 2015-06-27 The world wide operations of the U S Army in World War II involved an enormous amount of construction and the performance on a comparable scale of many other missions by the Corps of Engineers This is the first of four volumes that will describe the participation of the Engineers in the war and the contribution they made toward winning it Better known to the public in peacetime for its civil works the Corps by the time of Pearl Harbor had turned almost its full attention to military duties At home the Engineers took over all military construction and prepared hundreds of thousands of Engineer troops for a variety of tasks overseas These tasks included not only construction but also a number of other duties more or less related to engineering both in rear areas and in the midst of battle In performing these duties in World War II the Army Engineers gained a proud record in combat as well as in service This first volume tells how the Corps organized and planned and prepared for its tasks and in particular how it trained its troops and obtained its equipment The volumes still to be published will describe the huge program of military construction in the United States and Engineer operations overseas in the European and Pacific areas One of the objectives of the technical service volumes of the Army s World War II series is to capture the point of view of the service concerned In doing so the authors of the present history by thorough research and diligent solicitation of assistance have also brought to their story a broad perspective and they have told it with a felicity that should make their work a valuable guide to the Army as a whole to the thoughtful citizen and to the Engineers who served and who continue to serve the nation in war and in peace The Corps of Engineers Blanche D.
