DOING CALCULATIONS (FREE-RESPONSE QUESTION 3)**

An individual has decided to convert a grassy area on property to a large garden in order to grow food, primarily vegetables. The garden measures 50 meters in length by 7 meters in width.

- (a) **Describe** one environmental advantage of producing food locally.
- (b) Vegetable production in the garden was less than expected for the season.
 - i. **Identify** one soil property that affects crop production.
 - ii. The gardener applied a synthetic fertilizer to the garden for the next growing season. **Describe** one benefit of using synthetic fertilizer in the garden.
 - iii. A neighbor proposes using compost rather than a synthetic fertilizer on the garden, stating that composting is a more sustainable agricultural practice. **Justify** this claim.
- (c) The gardener finds a synthetic fertilizer with 34% nitrogen and a recommended application rate of 1 kg of nitrogen per 70.0 square meters. **Calculate** the number of kilograms of synthetic nitrogen fertilizer that should be spread on the garden area. **Show** your work.
- (d) The gardener also finds a local compost source with 2.5% nitrogen. **Calculate** the number of kilograms of compost that would need to be added to the garden to provide as much nitrogen as using the synthetic fertilizer. **Show** your work.
- (e) The price of a kilogram of synthetic fertilizer is \$3.11, while the price of a kilogram of compost is \$0.04. **Calculate** the savings to provide 1 kg of nitrogen per 70 square meters using compost rather than nitrogen. **Show** your work.

effort to reverse VA's position and obtain coverage. At the request of the VA Post Vietnam Dioxin Exposure in Agent Orange Contaminated C-123 Aircraft, it evaluates whether or not service in these C-123s could have plausibly resulted in exposures detrimental to the health of these Air Force Reservists. The Institute of Medicine assembled an expert committee to address this question qualitatively but in a scientific and evidence-based fashion. This report evaluates the reliability of the available information for establishing exposure and addresses and places in context whether any documented residues represent potentially harmful exposure by characterizing the amounts available and the degree to which absorption might be expected. Post Vietnam Dioxin Exposure rejects the idea that the dioxin residues detected on interior surfaces of the C-123s were immobile and effectively inaccessible to the Reservists as a source of exposure. Accordingly, this report states with confidence that the Air Force Reservists were exposed when working in the Operation Ranch Hand C-123s and so experienced some increase in their risk of a variety of adverse responses.

Encyclopedia of Ocean Sciences, 2019-04-12. The oceans cover 70% of the Earth's surface and are critical components of Earth's climate system. This new edition of *Encyclopedia of Ocean Sciences* Six Volume Set summarizes the breadth of knowledge about them, providing revised up-to-date entries as well as coverage of new topics in the field. New and expanded sections include microbial ecology, high latitude systems, and the cryosphere, climate and climate change, hydrothermal and cold seep systems. The structure of the work provides a modern presentation of the field, reflecting the input and different perspectives of chemical, physical, and biological oceanography, the specialized area of expertise of each of the three Editors in Chief. In this framework, maximum attention has been devoted to making this an organic and unified reference. Represents a one-stop organic information resource on the breadth of ocean science research. Reflects the input and different perspectives of chemical, physical, and biological oceanography, the specialized area of expertise of each of the three Editors in Chief. New and expanded sections include microbial ecology, high latitude systems, and climate change. Provides scientifically reliable information at a foundational level, making this work a resource for students as well as active researchers.

Wetlands and Water Resources: Ecological Solutions for the Environment Guangzhi Sun, Xiaofei Yu, Yuanchun Zou, Guobin Fu, 2023-04-12. Wetlands are usually located in complex landscapes. Multiple ecosystem services delivered by wetlands to human well-being should be considered in broader contexts of wetland functions, water quality, water resource management, and wetland conservation. Natural wetlands are kidneys and sponges of the earth that remove water pollutants and provide hydrological regulation functions vital to the environment. Where the functions of the wetlands are weakened, actions of rehabilitations are needed to revitalize those functions. While worldwide many natural wetlands have disappeared due to climate change and/or human activities, constructed wetlands, which may be seen as artificial kidneys/sponges of the earth, have been increasingly built to replicate the functions of the natural wetlands. This Research Topic aims to collect and present the latest research developments in

natural and constructed wetlands in relation to either water resource functions or water quality Articles published in this Research Topic will showcase new understandings of water balances and flow patterns vegetation characteristics and pollutant transformations in wetland systems innovative designs and efficiencies of wastewater treatment wetlands and technologies that revitalize the ecosystem functions of natural wetlands These articles are expected to bring benefits to research communities water and wastewater industries and government agencies that deal with wetland water management and conservation High quality Original Research and Review articles in this field are all welcome for submission to this Research Topic Research interests include but are not limited to the following areas 1 Water balances and flow patterns in natural wetland systems 2 The hydrological regulation functions and importance of natural wetlands in their environmental context 3 Vegetation characteristics of natural wetlands and their functional importance in wetland water pollution control 4 Techniques for the rehabilitation of degraded wetlands 5 The role of constructed wetlands in wastewater treatment 6 Innovative designs and efficiencies of wastewater treatment wetlands 7 The modeling of hydrological and or pollutant dynamics in wetland systems 8 The ecohydrology of wetlands 9 The role of wetlands in the global carbon cycle 10 Impacts of climate change and human activities on wetland hydrology and water resources Recognizing that hydrological and biogeochemical processes are basically coupled in wetlands and their landscapes manuscripts that report their interactions are particularly welcome
